Open to unique minds  
like yours.

### Pioneering the evolution of networks

At Nokia, we create technology that helps the world act together. As a trusted partner for critical networks, we are committed to innovation and technology leadership across mobile, fixed, and cloud networks. We create value with intellectual property and long-term research, led by the award-winning Nokia Bell Labs.

Adhering to the highest standards of integrity and security, we help build the capabilities needed for a more productive, sustainable, and inclusive world.

This is Nokia, but not as the world has seen us before. Our new visual identity reflects who we are today - a B2B technology innovation leader pioneering digital transformation. We're driving the future where networks meet cloud to accelerate digital across every industry and maximize the opportunities it offers.

Along with our new visual identity is 'the power of n'. The n stands for the exponential potential of networks. The networks that Nokia is pioneering that have the power to transform the way we all live and work.

Today, Nokia connects billions of people, machines, and devices around the world. You might be surprised how much our technology influences global digitalization and brings people together to solve some of the world's greatest challenges.

We're building networks on the moon. Or video call across the ocean - that's our tech, too. And, just as the world gets to grips with 5G, we're already fusing the digital with the human to develop Homo augmentus. Soon, the whole world and beyond will experience life in powerful new ways: extended realities, holograms, seamless global symphonies, and countless more turbocharged inventions.

Watch [our video](#) to discover how we create meaningful interactions to drive human progress.

### Our Culture

- We are the network specialists and connect across technologies - we are the Hyperscalers of communication
- We all can lead - be bold and experiment. Mistakes happen and we learn from them. At Nokia, we are a collection of human minds, not machines - we want to help you discover your potential
- We nurture a working environment that feels safe for people to be themselves and speak out when they need to
- We are committed to removing outdated barriers. We simplify processes that get in the way of brilliance. Bring your fresh ideas and help us look to the future.

## About Cloud & Network Services

Cloud and Network Services is a leading Nokia business group that offers Network solutions on Core, Business and Enterprise segments, as well as Cloud solutions and Cognitive Services. It is a newly formed business group, that includes most of the former Nokia Software business, Nokia's enterprise solutions, core network solutions including both voice and packet core, and managed and advanced services from its former Global Services unit. This unit will also act as a delivery channel of certain products from other business groups to enterprise customers. Cloud and Network Services (CNS) will target growth by leveraging the industry transition to cloud-based delivery, network-as-a-service business models, and software-led value creation.
