

# SCHEME OF EXAMINATION

&

SYLLABI

for

**Master of Technology  
(Computer Science & Engineering)  
Regular**

**GURU GOBIND SINGH  
INDRAPRASTHA  
UNIVERSITY**

**Guru Gobind Singh Indraprastha University**

Kashmere Gate, Delhi – 110403 [INDIA]

*www.ipu.ac.in*

## **Eligibility Condition**

B. Tech / B.E in Electronics & Communication / Electronics / Computer Science / Information Technology or equivalent degree with 60% marks.

M Sc. In Electronics/Informatics with 60% marks.

## **Admission Procedure**

Admission will be made on the basis of GATE score in the relevant field.

If seats remain vacant after admitting the students with valid GATE score, then the admission will be made on the basis of merit of the qualifying marks subject to minimum 60% marks in the qualifying degree.

**Master of Technology**  
**(Computer Science & Engineering)**

**First Semester**

Code No.	Paper	L	T/P	Credits
<b>Theory Papers</b>				
*ITR-601	<b>Algorithm Analysis &amp; Design</b>	4	-	4
ITR-603	Software Engineering	4	-	4
ITR-605	Advanced Computer Architecture	4	-	4
*ITR-607	<b>Advanced Computer Networks</b>	4	-	4
<b>Electives (chose any one)</b>				
*ITR-609	<b>DSD using VHDL</b>	4	-	4
*ITR-611	<b>Data Base Management systems</b>	4	-	4
ITR-613	Communication Systems	4	-	4
*ITR-615	<b>Advanced Computer Graphics</b>	4	-	4
*ITR-617	<b>Programming Language</b>	4	-	4
<b>Practical</b>				
ITR-651	Algorithm Analysis Lab	0	2	1
ITR-653	Software Engineering Lab	0	2	1
ITR-655	Advanced Computer Network Lab		2	1
ITR-657	Lab based on Elective	0	2	1
<b>Total</b>		<b>20</b>	<b>8</b>	<b>24</b>

**NOTE:** The subject marked with (\*) have been coded uniformly across M. Tech (IT) and M. Tech (CSE). Minor modifications have been done in the course contents and syllabi of these subjects.

**Master of Technology**  
**(Computer Science & Engineering)**

**Second Semester**

Paper Code	Paper	L	T/P	Credits
*ITR-602	Object Oriented software Engineering	4	-	4
*ITR-614	Advanced Data Base Management System	4	-	4
*ITR-630	Enterprise Computing in JAVA	4	-	4
<b>Electives (Choose any Two)</b>				
*ITR-604	Embedded System Design using 8051	4	-	4
*ITR-606	Wireless Mobile Networks	4	-	4
*ITR-610	Digital Signal Processing	4	-	4
ITR-620	Neural Networks	4	-	4
*ITR-622	Network Programming	4	-	4
*ITR-624	Fuzzy Logic & Design	4	-	4
*ITR-626	Genetic Algorithms	4	-	4
ITR-634	AI and Applications	4	-	4
ITR-632	Project Work	4	-	4
<b>Practical</b>				
ITR-652	OOSE Lab	-	2	1
ITR-654	ADBMS Lab	-	2	1
ITR-656	Java based lab	-	2	1
ITR-658	Lab based on elective	-	2	1
	<b>Total</b>	<b>20</b>	<b>8</b>	<b>24</b>

**Master of Technology**  
**(Computer Science & Engineering)**

**Third Semester**

Paper Code	Paper	L	T/P	Credits
*ITR-701	<b>Multimedia Technology</b>	4	-	4
ITR-707	Network Management & Security	4		4
<b>Electives (Choose any Two)</b>				
ITR-713	Software Testing	4		4
*ITR-719	<b>Cellular &amp; Mobile Communication</b>	4	-	4
*ITR-723	<b>Distributed Computing</b>	4	-	4
ITR-727	Digital Image Processing	4	-	4
*ITR-729	<b>Information Storage &amp; Management</b>	4	-	4
ITR-731	Advanced Software Project Management	4	-	4
ITR-733	Data Warehousing & Data Mining	4	-	4
ITR-739	Soft Computing	4	-	4
ITR-741	Bluetooth Technology	4	-	4
ITR-743	Cyber Crime Investigations and Cyber Forensics	4	-	4
<b>Practical</b>				
ITR-751	Multimedia Lab	-	4	2
ITR-753	NMS Lab	-	2	2
ITR-753	Lab based on Elective(s)	-	-	2
ITR-755	Minor Project Work	-	-	6
	<b>Total</b>	<b>16</b>	<b>8</b>	<b>28</b>

**Master of Technology**  
**(Computer Science & Engineering)**

**Fourth Semester**

<b>Paper Code</b>	<b>Paper</b>	<b>L / P</b>	<b>Credits</b>
ITR - 752	Dissertation	-	24
ITR – 754*	Seminar & Progress Report	-	4
	<b>TOTAL</b>	-	<b>28</b>

**\*Non University Exam System**

**NOTE:**

1. The total number of credits of the Programme M. Tech. = 104.
2. Each student shall be required to appear for examination in all courses. However, for the award of the degree a student shall be required to earn the minimum of 100 credits.

**Unit 1-** Introduction to Algorithm, The role of algorithms in computing, Asymptotic notation, asymptotic analysis of recurrence relations, probabilistic analysis and randomized algorithm, the hiring problem, indicator random variables

Divide and conquer paradigm – Merge sort, Inversion counting

Dynamic Programming – Matrix Chain multiplication, Longest Common subsequence, optimal binary search trees

Greedy Algorithm –Activity Selection problem, Theoretical foundation of greedy algorithm, Task Scheduling problem, Comparison of dynamic programming and Greedy algorithm with Knapsack as case study

**Unit 2-** Graphs: Review of Graphs (Representation, Depth First Search, Breath First search, Kruskal and Prim Algorithm, Dijkstra’s Algorithm)

Flow networks: Ford-Fulkerson method, comparison Networks, Zero-one Principle, Bitonic Sorting Network, Merging Network, Sorting Network

**Unit 3 :** Matrix Operation (Properties, Strassen’s Algorithm, Solution of linear equation, Matrix inversion)

Polynomial and FFT, Representation of polynomials, The DFT and FFT, efficient FFT implementation

Number-Theoretic Algorithm, Elementary number-theoretic notion, Greatest common divisor, modular arithmetic, solving modular linear equation, the Chinese remainder theorem

**Unit 4 -** NP-Completeness, Polynomial time, Polynomial time verification, NP-completeness and reducibility, NP-Completeness proofs

Approximation Algorithms- the vertex-cover problem, The Traveling-Salesman Problem, The set covering problem

#### Text Books:

1. T. H. Cormen, C. E. Leiserson, R.L. Rivest, C. Stein, “Introduction to Algorithms”, 2<sup>nd</sup> Edition, PHI.

#### Reference Books:

1. A.V. Aho, J. E. Hopcroft, J.D. Ulman, “The Design & Analysis of Computer Algorithms”, Addison Wesley.
2. V. Manber, “Introduction to Algorithms – A Creative Approach”, Addison Wesley.
3. Ellis Harwitz and Sartaz Sahani, “Fundamentals of Computer Algorithms”, Galgotia.

**Introduction:**

Software Crisis, Software Processes & Characteristics, Software life cycle models, Waterfall, Prototype, Evolutionary and Spiral Models, Overview of Quality Standards like ISO 9001, SEI – CMM.

**Software Requirements analysis & specifications:**

Requirement engineering, requirement elicitation techniques like FAST, QFD & Use case approach, requirements analysis using DFD, Data dictionaries & ER Diagrams, Requirements documentation, Nature of SRS, Characteristics & organization of SRS.

**Software Project Planning:**

Size Estimation like lines of Code & Function Count, Cost Estimation Models, Static single & Multivariable Models, COCOMO, COCOMO-II, Putnam resource allocation model, Risk Management.

**Software Design:**

Cohesion & Coupling, Classification of Cohesiveness & Coupling, Function Oriented Design, Object Oriented Design, User Interface Design.

**Software Metrics:**

Software measurements: What & Why, Token Count, Halstead Software Science Measures, Design Metrics, Data Structure Metrics, Information Flow Metrics

**Software Testing:**

Testing process, Design of test cases, functional testing: Boundary value analysis, Equivalence class testing, Decision table testing, Cause effect graphing, Structural testing, Path Testing, Data flow and mutation testing, Unit Testing, Integration and System Testing, Debugging, Alpha & Beta Testing, Regression Testing, Testing Tools & Standards.

**Software Reliability:**

Importance, Hardware Reliability & Software Reliability, Failure and Faults, Reliability Models, Basic Model, Logarithmic Poisson Model, Calendar time Component.

**Software Maintenance:**

Management of Maintenance, Maintenance Process, Maintenance Models, Reverse Engineering, Software Re-engineering, Configuration Management, Documentation.

**Test Books:**

1. K. K. Aggarwal & Yogesh Singh, "Software Engineering", New Age International, 2001.
2. R. S. Pressman, "Software Engineering – A practitioner's approach", 5<sup>th</sup> Ed., McGraw Hill Int. Ed., 2001.

**Reference Books:**

1. R. Fairley, "Software Engineering Concepts", Tata McGraw Hill, 1997.
2. P. Jalote, "An Integrated approach to Software Engineering", Narosa, 1991.
3. Stephen R. Schach, "Classical & Object Oriented Software Engineering", IRWIN, 1996.
4. James Peter, W. Pedrycz, "Software Engineering", John Wiley & Sons., 1999

5. I. Sommerville, "Software Engineering", Addison. Wesley, 1999

**Parallel computer models:**

The state of computing, Classification of parallel computers, Multiprocessors and multicomputers, Multivector and SIMD computers.

**Program and network properties:**

Conditions of parallelism, Data and resource Dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain Size and latency, Program flow mechanisms, Control flow versus data flow, Data flow Architecture, Demand driven mechanisms, Comparisons of flow mechanisms

**System Interconnect Architectures:**

Network properties and routing, Static interconnection Networks, Dynamic interconnection Networks, Multiprocessor system Interconnects, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.

**Advanced processors:**

Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar Processors, VLIW Architectures, Vector and Symbolic processors

**Pipelining:**

Linear pipeline processor, nonlinear pipeline processor, Instruction pipeline Design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch Handling techniques, branch prediction, Arithmetic Pipeline Design, Computer arithmetic principles, Static Arithmetic pipeline, Multifunctional arithmetic pipelines

**Memory Hierarchy Design:**

Cache basics & cache performance, reducing miss rate and miss penalty, multilevel cache hierarchies, main memory organizations, design of memory hierarchies.

**Multiprocessor architectures:**

Symmetric shared memory architectures, distributed shared memory architectures, models of memory consistency, cache coherence protocols (MSI, MESI, MOESI), scalable cache coherence, overview of directory based approaches, design challenges of directory protocols, memory based directory protocols, cache based directory protocols, protocol design tradeoffs, synchronization,

**Scalable point – point interfaces:**

Alpha364 and HT protocols, high performance signaling layer.

**Enterprise Memory subsystem Architecture:**

Enterprise RAS Feature set: Machine check, hot add/remove, domain partitioning, memory mirroring/migration, patrol scrubbing, fault tolerant system.

**Text Books:**

1. Kai Hwang, “Advanced computer architecture”; TMH. 2000

2. D. A. Patterson and J. L. Hennessey, "Computer organization and design", Morgan Kaufmann, 2nd Ed. 2002

**Reference Books:**

1. J.P.Hayes, "computer Architecture and organization"; MGH. 1998
2. Harvey G.Cragon,"Memory System and Pipelined processors"; Narosa Publication. 1998
3. V.Rajaraman & C.S.R.Murthy, "Parallel computer"; PHI. 2002
4. R.K.Ghose, Rajan Moona & Phalguni Gupta, "Foundation of Parallel Processing", Narosa Publications, 2003
5. Kai Hwang and Zu, "Scalable Parallel Computers Architecture", MGH. 2001
6. Stalling W, "Computer Organisation & Architecture", PHI. 2000
7. D.Sima, T.Fountain, P.Kasuk, "Advanced Computer Architecture-A Design space Approach,"Addison Wesley,1997.
8. M.J Flynn, "Computer Architecture, Pipelined and Parallel Processor Design"; Narosa Publishing. 1998
9. D.A.Patterson, J.L.Hennessey, "Computer Architecture :A quantitative approach"; Morgan Kauffmann feb,2002.
10. Hwan and Briggs, " Computer Architecture and Parallel Processing"; MGH. 1999

**Introduction:**

Introduction to Network models-ISO-OSI, SNA, Appletalk and TCP/IP models. Review of Physical layer and Data link layers, Review of LAN (IEEE 802.3, 802.5, 802.11b/a/g, FDDI) and WAN (Frame Relay, ATM, ISDN) standards.

**Network layer**

ARP, RARP, Internet architecture and addressing, internetworking, IPv4, overview of IPv6, ICMP, Routing Protocols- RIP, OSPF, BGP, IP over ATM.

**Transport layer**

Design issues, Connection management, Transmission Control Protocol (TCP), User Datagram Protocol (UDP), Finite state machine model.

**Application layer**

WWW, DNS, e-mail, SNMP, RMON

**Network Security:** Cryptography, Firewalls, Secure Socket Layer (SSL) and Virtual Private Networks (VPN).

**Case study**

Study of various network simulators, Network performance analysis using NS2

**TEXT BOOKS:**

1. Behrouz A. Forouzan, "TCP/IP Protocol Suit", TMH, 2000.
2. Tananbaum A. S., "Computer Networks", 3<sup>rd</sup> Ed., PHI, 1999.

**REFERENCES:**

1. Black U, "Computer Networks-Protocols, Standards and Interfaces", PHI, 1996.
2. Stallings W., "Data and Computer Communications", 6<sup>th</sup> Ed., PHI, 2002.
3. Stallings W., "SNMP, SNMPv2, SNMPv3, RMON 1 & 2", 3<sup>rd</sup> Ed., Addison Wesley, 1999.
3. Laurra Chappell (Ed), "Introduction to Cisco Router Configuration", Techmedia, 1999.

Gajski's 'Y' chart, Introduction to HDL languages, VHDL, Verilog, key differences, structural, sequential construct, concurrent construct.

VHDL Overview and concept: VHDL object classes, VHDL Design Unit, identifier, operators, Data types, behavioral, and data flow modeling, Concurrent and sequential statements

VHDL for combinational circuits: Assignment statement, selected signal statement, conditional signal assignment, Designing of basic combinational circuit: Multiplexer, Decoders, Encoders, Code converter, Comparator, Structural modeling: component declaration & instantiation, Signal and Variables, Attributes, Block statements, Generics, Generate statement, VHDL Timing: WAIT statements, simulation engine, modeling with delta time delays,

Sequential Circuits: process, if, case, Loop, Designing FF, Mealy state model, Design of FSM using VHDL, VHDL code of moore-type FSMs, synthesis of VHDL code, Specifying the state assignment in VHDL code, Specification in Mealy FSM using VHDL, Mealy-type FSM for serial adder, Moore type FSM for serial adder, State minimization, Design of Counters using sequential circuit approach, Algorithm state Machine,

Testbenches: Testbench modeling, Testbench architecture, Register Transfer Level Design: RTL Design Method, Organization of system, specification of RTL System, Data Subsystem, Control Subsystem, Microprogrammed controller: structure and format, Microinstruction timing, study of FIR filter Design Example

#### **Textbooks:**

1. Circuit Design with VHDL by Volnei A. Pedroni, PHI, 2005
2. Digital Logic Design with VHDL by Stephen Brown and Zvonko Vranesic, TMH, 2007

#### **Reference Books:**

1. A VHDL Primer by J. Bhaskar, Pearson Education, 1999.
2. Digital Design by Frank Vahid, Wiley, 2006
3. VHDL Coding Styles and Methodology by Ben Cohen, Springer India, 2005
4. Digital System Design with VHDL and synthesis by K.C. Chang, Wiley, 2005
5. Introduction to Digital Systems by M. Ercegovic, T. Lang and L.J. Moreno, Wiley, 2000
6. Digital System Design using VHDL by C. H. Roth, Thomson Learning, 2006

**Basic concepts:**

Database & database users, characteristics of the database, database systems, concepts and architecture, data models, schemas & instances, DBMS architecture & data independence, database languages & interfaces, data modelling using the entity-relationship approach. Overview of hierarchical, Network & Relational Data Base Management Systems.

**Relational model, languages & systems:**

Relational data model & relational algebra: relational model concepts, relational model constraints, relational algebra, SQL- a relational database language: data definition in SQL, view and queries in SQL, specifying constraints and indexes in sql, a relational database management systems.

Oracle Architecture, Logical Data Structures Physical Data Structure, Instances, Table Spaces, Types of Tablespaces, Internal Memory Structure, Background Processes, Data Types, Roles & Privileges, Stored Procedures, User Defined Functions, Cursors, Error Handling, Triggers.

**Relational data base design:**

Function dependencies & normalization for relational dataases: functional dependencies, normal forms based on primary keys, (1NF, 2NF, 3NF & BCNF), lossless join and dependency preserving decomposition.

**Concurrency control & recovery techniques:**

Concurrency control techniques, locking techniques, time stamp ordering, granularity of data items, recovery techniques: recovery concepts, database backup and recovery from catastrophic failures.

Concepts of object oriented database management systems, Distributed Data Base Management Systems.

**Text Books:**

1. Silberschatz, Korth, Sudarshan, "Database System Concepts", Mcgraw Hill, 6<sup>th</sup> Edition, 2006
2. Elmars, Navathe, Somayajulu, Gupta, "Fundamentals of Database Systems", 4<sup>th</sup> Edition, Pearson Education, 2007

**Reference Books:**

1. Date, Kannan, Swaminathan, "An Introduction to Database Systems", 8<sup>th</sup> Edition Pearson Education, 2007
2. Singh S.K., "Database System Concepts, design and application", Pearson Education, 2006
3. Ullman, J. D., "Principals of database systems", Galgotia publications, 1999
4. Rob, Coronell, "Database Systems Design, Implementation and Management", 5<sup>th</sup> edition, Thomson Course Technology, 2003.
5. Oracle Reference Manual.
6. Michael J. Donahoo, Gregory D. Speegle, "SQL practical guide for developers", Elsevier Inc., 2005

7. Sams Teach yourself MySQL in 21 days, 2<sup>nd</sup> edition, Pearson Education, 2004.

**Analog Modulation Methods:**

Amplitude Modulation: Generation & Demodulation of AM waves, DSBSC waves, Coherent Detection of DSBSC signal, Angle Modulation: Frequency & Phase Modulation, BW of FM waves, Generation & Demodulation of FM waves, Comparison of AM, FM & PM.

**Pulse Analog Modulation:**

Sampling theorem, Sampling of Low Pass and Band pass signals, Aliasing, Aperture effect, PAM, PWM and PPM generation and demodulation, TDM.

**Pulse Digital Modulation:**

Pulse code modulation signal to quantization noise ratio, companding, DPCM, Prediction Filter, DM and ADM modulators and demodulators, Data Modem, Data encoding methods, ASK, FSK, PSK, QAM, M-ary systems, line coding, Inter symbol Interference, Multiplexing methods: time division multiplexing (TDM), STDM, CDMA, FDM.

**Introduction to Information Theory:**

Discrete messages, The concept of amount of information, Entropy, Information rate, mutual information, Shannon's source coding Theorem, Huffman code, Lempel –ziv code, channel coding and channel capacity theorem. Coding to increase average information per bit, Shannon's theorem, Capacity of a Gaussian channel, Bandwidth – S/N tradeoff, use of orthogonal signals to attain Shannon's limit.

**Text Books:**

1. Taub and Schilling, "Principles of Communication Systems", TMH, 2<sup>nd</sup> Edition, 2001
2. S. Haykin, "Analog and Digital Communication", Wiley., 2002

**Reference Books:**

1. Hancocok J. C., "An Introduction to the Principles of Communication Theory", TMH, 2002
2. Tomasi, "Electronic Communication Systems", 4<sup>th</sup> ed., Pearson Education, 2001
3. William Stallings – Data & Computer Communications, PHI (6<sup>th</sup> Ed.),
4. Forouzan – Data Communication & Networking, McGraw Hill, 2<sup>nd</sup> Edition, 1999

**Line Drawing and transformation:**

Basic raster graphical algorithm for 2D primitives, Line drawing algorithm, 2D and 3D transformation

**Clipping:**

Window, Viewport, Clipping algorithm,

**Curves and Surfaces:**

Circle drawing algorithm, Ellipse drawing algorithm, Bezier curve, b-spline curve, surfaces, Solid modelling

**Projection:**

Parallel projection, Perspective projection , Computation of vanishing point

**Visible surface determination:**

Z-buffer algorithm, Scan line algorithm, Area subdivision algorithm, Raytracing algorithm

**Shading:**

Illumination mode, Specular reflection model, Shading models for curve surfaces, Radiosity method, Rendering, Recursive ray tracing, Texture mapping

Advanced Modelling Techniques

Procedural Models, Fractal Models, Grammar based models, particle systems.

Animation

3D animation, morphing, simulation of key frames

**Text Books:**

1. Foley - Computer Graphics Principles & Practice, 2<sup>nd</sup> ed. Pearson Education., 2000
2. Hearn & Baker - Computer Graphics C version, 2<sup>nd</sup> ed. Pearson Education., 1986

**References:**

**ITR-617      Programming Languages**

**L      T/P    C**  
**4      0      4**

Programming Domains. Language evaluation. Evolution of major programming languages. Describing Syntax and Semantics. Formal methods of Describing Syntax and semantics. Backus Naur Form. Attribute grammars. Describing semantics - Denotational semantics. Data types and ariables - Names - variables . Scope and lifetime. Expression and assignment Statements.

Control structures. Subprograms - parameter passing - overloading - generic subprograms, Data abstraction and Encapsulation. Polymorphism and inheritance. Features of object oriented Languages. Smalltalk, C++ and JAVA. Design and implementation issues. Exception handling. Constructs for concurrency

Functional programming languages - Lambda calculus- Introduction to pure LISP. Applications of functional programming languages.

Logic programming languages- a brief introduction to predicate calculus - Horn clauses - Logic programming. Introduction to prolog. Applications of Logic programming.

**Text Books:**

1. Terence W. Pratt, "Programming Languages", Prentice Hall, Ninth edition 1996
2. Ravi Sethi, "Programming Languages-concepts and constructs", Addison Wesley, Second Edition, 1996

**Introduction to Software Engineering:**

Software Engineering Development, Software Life Cycle Models, Standards for developing life cycle models.

**Object Methodology & Requirement Elicitation:**

Introduction to Object Oriented Methodology, Overview of Requirements Elicitation, Requirements Model-Action & Use cases, Requirements Elicitation Activities, Managing Requirements Elicitation

**Architecture:**

Model Architecture, Requirements Model, Analysis Model, Design Model, Implementation Model, Test Model

**Modeling with UML:**

Basic Building Blocks of UML, A Conceptual Model of UML, Basic Structural Modeling, UML Diagrams

**System Analysis:**

Analysis Model, Dynamic Modelling & Testing

**System Design:**

Design concepts & activities, Design models, Block design, Testing

**Testing Object Oriented Systems:**

Introduction, Testing Activities & Techniques, The Testing Process, Managing Testing, State Based testing and Data flow testing for Classes.

Component Based Computing

Fundamentals: Definition and nature of components, components and interfaces, Interfaces as contracts, the benefits of components.

Basic Techniques: component design and assembly, Relationship with the client-server model and with patterns, Use of objects and object lifecycle services, use of object brokers

**Case Studies****Text Books:**

1. Ivar Jacobson "Object Oriented Software Engineering: A Use Case Driven Approach", Addison-Wesley, 2002
2. Grady Booch "Object-Oriented Analysis and Design with Applications", 2/E, Addison-Wesley Professional, 2005

**Reference Books:**

3. Bernd Bruegge, Allen H. Dutoit "Object Oriented Software Engineering: Using UML, Patterns and Java" 2/E Pearson Education.
4. Timothy C. Lethbridge, Robert Laganier "Object oriented Software Engineering: Practical Software development using UML and Java" McGraw Hill
5. Edwards Yourdon, Carl Argila "Case Studies in Object Oriented Analysis and Design" Prentice Hall.

### Relational Databases

Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.

### Query Processing and Optimization

Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information.

### Deductive Databases

Datalog and Recursion, Evaluation of Datalog program, Recursive queries with negation.

### Object Oriented and Object Relational Databases

Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases

### Parallel and Distributed Databases

Distributed Data Storage – Fragmentation & Replication, Location and Fragment Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, Parallel Query Evaluation.

### Advanced Transaction Processing

Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.

### Active Database and Real Time Databases

Triggers in SQL, Event Constraint and Action: ECA Rules, Query Processing and Concurrency Control, Compensation and Databases Recovery

### Image and Multimedia Databases

Modeling and Storage of Image and Multimedia Data, Data Structures – R-tree, k-d tree, Quad trees, Content Based Retrieval: Color Histograms, Textures, etc., Image Features, Spatial and Topological Relationships, Multimedia Data Formats, Video Data Model, Audio & Handwritten Data, Geographic Information Systems (GIS)

### WEB Database

Accessing Databases through WEB, WEB Servers, XML Databases, Commercial Systems.

### Data Mining

Knowledge Representation Using Rules, Association and Classification Rules, Sequential Patterns, Algorithms for Rule Discovery

Data Warehousing

Data Warehousing Architecture, Multidimensional Data Model, Update Propagation  
OLAP Queries.

Case Study: Oracle Xi

Introduction to Personal Communication Services (PCS): PCS architecture, Mobility management, Networks signaling.

Global system for Mobile Communication (GSM) system overview: GSM Architecture, Mobility Management, Network signaling.

General Packet Radio Services (GPRS): GPRS architecture, GPRS Network nodes.

Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP.

Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, Wireless Markup Languages (WML)

Third Generation (3G) Mobile Services: Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G.

Wireless local Loop (WLL): Introduction to WLL architecture, WLL technologies.

Global Mobile Satellite Systems: Case studies of IRIDIUM and GLOBALSTAR systems.

Bluetooth technology and Wi-Max

### Introduction

Signals and signal Processing, characterization & classification of signals, typical Signal Processing operations, example of typical Signals, typical Signals Processing applications.

### Time Domain Representation of Signals & Systems

Discrete Time Signals, Operations on Sequences, Linear shift-invariant systems, Stability and Causality, Linear constant coefficient difference equations, Frequency domain representation of discrete-time systems, symmetry properties of the Fourier transform, Sampling of continuous-time systems.

### Transforms

Z-transforms, Inverse Z-transform, properties of Z-transform, & its applications in system analysis & design. Discrete Fourier Transform (DFT) & its properties, computation of the DFT of real sequences, Linear Convolution using the DFT.

### Digital Filter Structure

Block Diagram representation, Signal Flow Graph Representation, Equivalent Structures, Basic FIR Digital Filter Structures: Direct forms, Transposed forms, Cascaded forms, Poly phase realization and Linear phase FIR structures. Basic IIR Filter Structures: Direct forms, Transposed forms, Cascaded realizations and Parallel realizations. All pass filters, Digital Sine-Cosine Generator.

### Digital Filter Design

Design of IIR Digital filters from analog filters, Properties of FIR digital filters, Design of FIR filters using Windows, Computer aided design of FIR filters, Comparison of IIR and FIR digital filters.

### Computation of Discrete Fourier Transform

Complexity of the DFT computation by direct method, Goertzel algorithm, Decimation – in-time FFT algorithms, Decimation-in frequency FFT algorithms.

Classical and Fuzzy Sets: Overview of Classical Sets, Membership Function,  $\alpha$ -cuts, Properties of  $\alpha$ -cuts, Decomposition Theorems, Extension Principle.

Operations on Fuzzy Sets: Compliment, Intersections, Unions, Combinations of Operations, Aggregation Operations.

Fuzzy Arithmetic: Fuzzy Numbers, Linguistic Variables, Arithmetic Operations on intervals & Numbers, Lattice of Fuzzy Numbers, Fuzzy Equations.

Fuzzy Relations: Crisp & Fuzzy Relations, Projections & Cylindric Extensions, Binary Fuzzy Relations, Binary Relations on single set, Equivalence, Compatibility & Ordering Relations, Morphisms, Fuzzy Relation Equations.

Possibility Theory: Fuzzy Measures, Evidence & Possibility Theory, Possibility versus Probability Theory.

Fuzzy Logic: Classical Logic, Multivalued Logics, Fuzzy Propositions, Fuzzy Qualifiers, Linguistic Hedges.

Uncertainty based Information: Information & Uncertainty, Nonspecificity of Fuzzy & Crisp sets, Fuzziness of Fuzzy Sets.

Applications of Fuzzy Logic:

**Introduction**

A brief history of evolutionary computation, Elements of Genetic Algorithms, A simple genetic algorithm, Applications of genetic algorithms

**Genetic Algorithms in Scientific models**

Evolving computer programs, data analysis & prediction, evolving neural networks, Modeling interaction between learning & evolution, modeling sexual selection, measuring evolutionary activity.

**Theoretical Foundation of genetic algorithm**

Schemas & Two-Armed and k-armed problem, royal roads, exact mathematical models of simple genetic algorithms, Statistical- Mechanics Approaches.

**Computer Implementation of Genetic Algorithm**

Data structures, Reproduction, crossover & mutation, mapping objective functions to fitness form, fitness scaling, coding, a multiparameter, mapped, fixed point coding, discretization and constraints.

**Some applications of genetic algorithms**

The risk of genetic algorithms, De Jong & function optimization, Improvement in basic techniques, current application of genetic algorithms

**Advanced operators & techniques in genetic search**

Dominance, duplicity, & abeyance, inversion & other reordering operators. Other micro operators, Niche & speciation, multiobjective optimization, knowledge based techniques, genetic algorithms & parallel processors.

**Introduction:**

Introduction to intelligent agents

**Problem solving:**

Solving problems by searching : state space formulation, depth first and breadth first search, iterative deepening

**Intelligent search methods:**

A\* and its memory restricted variants

**Production systems:**

Design implementation and limitations, case studies

**Game Playing:**

Minimax, alpha-beta pruning

**Knowledge and reasoning:**

Propositional and first order logic, semantic networks, building a knowledge base, inference in first order logic, logical reasoning systems

**Planning:**

STRIPS partial order planning, uncertain knowledge and reasoning, probabilistic reasoning systems, Bayesian networks

**Learning from observations:**

Inductive learning, learning decision trees, computational learning theory, Explanation based learning

**Applications:**

Environmental Science, Robotics, Aerospace, Medical Science etc.

**Introduction:**

Concept of Multimedia ,Media & data stream, main properties of multimedia system , Data stream characteristics &for continuous media Multimedia Applications, Hardware Software requirements, Storage Technologies: RAID, Optical Media.

**Components of multimedia and file formats:**

Text, Basic sound concepts , MIDI , Speech ,Basic concept of Images, Graphics format ,Basic concepts of Video & animation, Conventional system,Computer based animation, Authoring Tools, Categories of Authoring Tools.

**Compression Techniques**

Lossless and Lossy compression, Run length coding, Statistical Coding, Transform Coding, JPEG, MPEG, Text compression using static Huffmann technique, Dynamic Huffmann Technique, Arithmetic Technique.

**Animation:**

Introduction, Basic Terminology techniques, tweaning & morphing, Motion Graphics 2D & 3D animation.

**Introduction to MAYA(Animating Tool):**

Fundamentals, Modeling: NURBS, Polygon, Organic,

Animation:Key frame animation,reactive animation,path animation,Skelton animationetc., deformers..

Dynamics: soft bodies, Rigid bodies and its usages in the scene etc.,

Rendering: soft,Hard renering. IPR rendering, Line and box rendering etc.,

Special Effects: Shading & Texturing Surfaces, Lighting, Special effects.

Working with MEL: Basics & Programming

**Text Book:**

1. David Hillman, “Multimedia Technology & Applications”, Galgotia Publications, 2000

**Reference Books:**

3. Maya manuals.

**Introduction**

Classical security Techniques and Computer Network Security Concepts. Confidentiality and Security, Security Policy and Operations Life Cycle, Security System Development and Operations

**Secure Networking Threats**

The Attack Process. Attacker Types. Vulnerability Types. Attack Results. Attack Taxonomy. Threats to Security: Physical security, Biometric systems, monitoring controls, and Data security and intrusion and detection systems.

**Encryption Techniques**

Conventional techniques, Modern techniques, DES, DES chaining, Triple DES, RSA algorithm, Key management. Message Authentication and Hash Algorithm, Authentication requirements and functions secure Hash Algorithm, Message digest algorithm, digital signatures. AES Algorithms.

**Designing Secure Networks**

Components of a Hardening Strategy. Network Devices. Host Operating Systems. Applications. Appliance-Based Network Services. Rogue Device Detection, Network Security Technologies The Difficulties of Secure Networking. Security Technologies. Emerging Security Technologies General Design Considerations, Layer 2 Security Considerations. IP Addressing Design Considerations. ICMP Design Considerations. Routing Considerations. Transport Protocol Design Considerations

**Network Security Platform Options**

Network Security Platform Options. Network Security Device Best Practices, Common Application Design Considerations. E-Mail. DNS. HTTP/HTTPS. FTP. Instant Messaging.

**IPsec VPN Design Considerations**

VPN Basics. Types of IPsec VPNs. IPsec Modes of Operation and Security Options. Topology Considerations. Design Considerations. Site-to-Site Deployment Examples.

**Secure Network Management and Network Security Management**

Organizational Realities. Protocol Capabilities. Tool Capabilities. Secure Management Design Options. Network Security Management, Firewalls, Trusted systems, IT act and cyber laws.

**Introduction:** What is software testing and why it is so hard?, Error, Fault, Failure, Incident, Test Cases, Testing Process, Limitations of Testing, No absolute proof of correctness, Overview of Graph Theory.

**Functional Testing:** Boundary Value Analysis, Equivalence Class Testing, Decision Table Based Testing, Cause Effect Graphing Technique.

**Structural Testing:** Path testing, DD-Paths, Cyclomatic Complexity, Graph Metrics, Data Flow Testing, Mutation testing.

**Reducing the number of test cases:**

Prioritization guidelines, Priority category, Scheme, Risk Analysis, Regression Testing, Slice based testing

**Testing Activities:** Unit Testing, Levels of Testing, Integration Testing, System Testing, Debugging, Domain Testing.

**Object Oriented Testing:** Issues in Object Oriented Testing, Class Testing, GUI Testing, Object Oriented Integration and System Testing.

**Testing Tools:** Static Testing Tools, Dynamic Testing Tools, Characteristics of Modern Tools.

### Introduction to Cellular Mobile Systems

A basic cellular system, performance criteria, uniqueness of mobile radio environment, operation of cellular systems, planning of cellular system, overview of generations of cellular systems.

### Elements of Cellular Radio Systems Design and interference

General description of the problem, concept of frequency reuse channels, co-channel interference reduction factor, desired C/I from a normal case in an omni directional antenna system, cell splitting, consideration of the components of cellular systems, introduction to co-channel interference, co-channel measurement design of antenna system, antenna parameter and their effects.

### Cell Coverage for Signal & antenna structures

General introduction, obtaining the mobile point to point mode, propagation over water or flat open area, foliage loss, propagation near in distance, long distance propagation, point to point prediction model-characteristics, cell site, antenna heights and signal coverage cells, mobile to mobile propagation, Characteristics of basic antenna structures, antenna at cell site, mobile antennas.

### Frequency Management & Channel Assignment, Hand Off & Dropped Calls

Frequency management, fixed channel assignment, non-fixed channel assignment, traffic & channel assignment. Why hand off, types of hand off and their characteristics, dropped call rates & their evaluation.

### Modulation method and coding for error detection and correction

Introduction to Digital modulation techniques, modulation methods in cellular wireless systems, OFDM. Block coding, convolution coding and Turbo coding.

### Multiple access techniques: FDMA, TDMA, CDMA,

Time-division multiple access (TDMA), code division multiple access (CDMA), CDMA capacity, probability of bit error considerations, CDMA compared with TDMA

### Spread spectrum Techniques:

Direct sequence spread spectrum, Frequency Hopping Spread spectrum techniques.

**ITR-723      Distributed Computing**

L	T/P	C
4	0	4

Fundamentals of Distributed Computing:

Architectural models for distributed and mobile computing systems. Basic concepts in distributed computing such as clocks, message ordering, consistent global states, and consensus.

Basic Algorithms in Message:

Passing Systems, Leader Election in Rings, and Mutual Exclusion in Shared Memory, Fault-Tolerant Consensus, Causality and Time. Message Passing: PVM and MPI.

Distributed Operating Systems:

OS and network operating systems, Distributed File systems. Middleware, client/server model for computing, common layer application protocols (RPC, RMI, streams), distributed processes, network naming, distributed synchronization and distributed object-based systems.

Simulation:

A Formal Model for Simulations, Broadcast and Multicast, Distributed Shared Memory, Fault-Tolerant Simulations of Read/Write Objects Simulating Synchrony, Improving the Fault Tolerance of Algorithms, Fault-Tolerant Clock Synchronization.

Distributed Environments:

Current systems and developments (DCE, CORBA, JAVA).

Advanced Topics:

Randomization, Wait-Free Simulations of Arbitrary Objects, Problems Solvable in Asynchronous Systems, Solving Consensus in Eventually Stable Systems, High Performance Computing-HPF, Distributed and mobile multimedia systems. Adaptability in Mobile Computing. Grid Computing and applications. Fault tolerant Computing Systems.

Parallel Processing:

Basic Concepts: Introduction to parallel processing, parallel processing terminology, Parallel & Distributed Programming: Parallel Programming environments

**Text Books:**

### Introduction And Digital Image Fundamentals

The origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamentals Steps in Image Processing, Elements of Digital Image Processing Systems, Image Sampling and Quantization, Some basic relationships like Neighbours, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations.

### Image Enhancement in the Spatial Domain

Some basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Basics of Spatial Filters, Smoothing and Sharpening Spatial Filters, Combining Spatial Enhancement Methods.

### Image Enhancement in the Frequency Domain

Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphic Filtering.

### Image Restoration

A model of The Image Degradation / Restoration Process, Noise Models, Restoration in the presence of Noise Only Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear Position-Invariant Degradations, Estimation of Degradation Function, Inverse filtering, Wiener filtering, Constrained Least Square Filtering, Geometric Mean Filter, Geometric Transformations.

### Image Compression

Coding, Interpixel and Psychovisual Redundancy, Image Compression models, Elements of Information Theory, Error free comparison, Lossy compression, Image compression standards.

### Image Segmentation

Detection of Discontinuities, Edge linking and boundary detection, Thresholding, Region Oriented Segmentation, Motion based segmentation.

### Representation and Description

Representation, Boundary Descriptors, Regional Descriptors, Use of Principal Components for Description, Introduction to Morphology, Some basic Morphological Algorithms.

### Object Recognition

Patterns and Pattern Classes, Decision-Theoretic Methods, Structural Methods.

### Text Books:

1. Rafael C. Gonzales & Richard E. Woods, "Digital Image Processing", 2<sup>nd</sup> edition, Pearson Education, 2004
2. A.K. Jain, "Fundamental of Digital Image Processing", PHI, 2003

### Reference Books:

Complexity of Information Management: Proliferation of Data, Data Center Evolution, Managing Complexity, I/O and the five pillars of technology, Storage Infrastructure, Evolution of Storage

Storage Systems Architecture: Modern Storage Systems, Storage Systems, Intelligent Disk Subsystems , Physical Disks , Back End ,Cache ,Front End , Host Environment

Introduction to Networked Storage: Storage Networking Overview, Direct Attached Storage, Storage Area Networks, Case study – Applying SAN concepts, Network Attached Storage, Case study – Applying NAS concepts, IP SAN, CAS, Hybrid Network Storage Based Solutions/ Emerging Technologies, Case study – Applying SAN, NAS, IP SAN concepts

Introduction to Information Availability: Business Continuity Overview, Data Availability, Business Continuity – Local, Case study – Applying local information availability strategies, Business Continuity – Remote, Case study – Applying remote information availability strategies, Disaster Recovery

Managing and Monitoring: Monitoring in the Data Center, Case study – Monitoring exercise, Management in the Data Center, Case study – Managing exercise

Case Studies must be supported by laboratory

**Text Book:**

2. Robert Spalding, "Storage Networks: The Complete Reference", Tata Mcgraw Hill, 2003
3. NIIT, "Introduction to Information Security Risk Management" , Prentice-Hall of India, 2000

**Introduction to Software Project Management:**

Software development as a project; Stakeholders in software project; Software product, process, resources, quality, and cost; Objectives, issues, and problems relating to software projects.

**Overview of Project Planning:**

Steps in project planning; Defining scope and objectives; work breakdown structure; Deliverables and other products; time, cost, and resource estimation; Alternatives in planning

**Project Evaluation:**

Strategic assessment; Technical assessment; Cost-benefit analysis; Cash flow forecasting; Cost-benefit evaluation techniques; Break-even analysis; Risk evaluation

**Selection of Appropriate Project Approach:**

Choosing development technology and methodology; choice of process model; Rapid application development; Waterfall model; V-process model; Spiral model; Prototyping;; Incremental delivery.

**Software Effort Estimation**

Problem in software estimation; Effort estimation techniques; Expert judgement; Estimation by analogy; Delphi technique; Algorithmic methods; Top-down and bottom-up estimation; Function point analysis; Object points; COCOMO model.

**Activity Planning**

Network planning model; Activity-on-arrow network; Precedence network; Forward pass; Backward pass; Critical path; Slack and float.

**Risk Analysis and Management**

Nature and categories of risk in software development; risk Identification; Risk assessment; Risk mitigation, monitoring, and management; Evaluating schedule risk using PERT.

**Resource Allocation**

Nature of project resources; Identifying resource requirement of activities; Allocating and scheduling resources; cost of resources; Standard, planned, and actual cost; Cost variance; time-cost trade-off.

**Project Tracking and Control**

Measurement of physical and financial progress; Earned value analysis; Status reports; Milestone reports; Change control.

**Contact Management**

Outsourcing of products and services; Types of contracts; Stages in contract placement; Terms of contract; Contract monitoring; Acceptance testing

### Managing People and Organizing Teams

Organizational behaviour; Recruitment and placement; Motivation; Group behaviour; Individual and group decision making; Leadership and leadership styles; forms of organizational structures.

### Software Quality Assurance

Planning for quality; Product versus process quality management; Procedural and quantitative approaches; Defect analysis and prevention; Statistical process control; Pareto analysis; Causal analysis; Quality standards; ISO 9000; Capability Maturity Model; Quality audit.

### Configuration Management

Configuration management process; Software configuration items; Version control; change control; Configuration audit; Status reporting.

## ITR – 733 Data Warehousing & Data Mining

L	T/P	C
4	0	4

### Data Warehousing:

Introduction to Data Warehousing: Evolution of Data Warehousing, Data Warehousing concepts, Benefits of Data Warehousing, Comparison of OLTP and Data Warehousing, Problems of Data Warehousing.

### Data Warehousing Architecture

Architecture: Operational Data and Datastore, Load Manager, Warehouse Manager, Query Manager, Detailed Data, Lightly and Highly summarised Data, Archive/Backup Data, Meta-Data, architecture model, 2-tier, 3-tier and 4-tier data warehouse, end user Access tools.

### Data Warehousing Tools and Technology

Tools and Technologies: Extraction, cleaning and Transformation tools, Data Warehouse DBMS, Data Warehouse Meta-Data, Administration and management tools, operational vs. information systems.

OLAP & DSS support in data warehouse.

### Distributed Data Warehouse

Types of Distributed Data Warehouses, Nature of development Efforts, Distributed Data Warehouse Development, Building the Warehouse on multiple levels.

### Types of Data Warehouses & Data Warehouse Design

Host based, single stage, LAN based, Multistage, stationary distributed & virtual data-warehouses. Data warehousing Design: Designing Data warehouse Database, Database Design Methodology for Data Warehouses, Data Warehousing design Using Oracle, OLAP and data mining: Online Analytical processing, Data mining.

### Knowledge discovery

Knowledge discovery through statistical techniques, Knowledge discovery through neural networks, Fuzzy technology & genetic algorithms.

2. Kamber and Han, “Data Mining Concepts and Techniques”, Hartcourt India P. Ltd., 2001

**Neural Networks:**

History, overview of biological Neuro-system, Mathematical Models of Neurons, ANN architecture, Learning rules, Learning Paradigms-Supervised, Unsupervised and reinforcement Learning, ANN training Algorithms-perceptions, Training rules, Delta, Back Propagation Algorithm, Multilayer Perceptron Model, Hopfield Networks, Associative Memories, Applications of Artificial Neural Networks.

**Fuzzy Logic:**

Introduction to Fuzzy Logic, Classical and Fuzzy Sets: Overview of Classical Sets, Membership Function, Fuzzy rule generation.

**Operations on Fuzzy Sets:**

Compliment, Intersections, Unions, Combinations of Operations, Aggregation Operations.

**Fuzzy Arithmetic:**

Fuzzy Numbers, Linguistic Variables, Arithmetic Operations on Intervals & Numbers, Lattice of Fuzzy Numbers, Fuzzy Equations.

**Fuzzy Logic:**

Classical Logic, Multivalued Logics, Fuzzy Propositions, Fuzzy Qualifiers, Linguistic Hedges.

**Uncertainty based Information:**

Information & Uncertainty, Nonspecificity of Fuzzy & Crisp Sets, Fuzziness of Fuzzy Sets.

**Introduction of Neuro-Fuzzy Systems:**

Architecture of Neuro Fuzzy Networks.

**Application of Fuzzy Logic:**

Medicine, Economics etc.

**Genetic Algorithm:**

An Overview, GA in problem solving, Implementation of GA

**Text:**

**Code No. ITR – 741**

**Subject: Bluetooth Technology**

<b>L</b>	<b>P</b>	<b>C</b>
<b>4</b>	<b>0</b>	<b>4</b>

Introduction to wireless technologies: WAP services, Serial and Parallel Communication, Asynchronous and synchronous Communication, FDM,TDM, TFM, Spread spectrum technology

Introduction to Bluetooth: Specification, Core protocols, Cable replacement protocol

Bluetooth Radio: Type of Antenna, Antenna Parameters, Frequency hopping

Bluetooth Networking: Wireless networking, wireless network types, devices roles and states, adhoc network, scatternet

Connection establishment procedure, notable aspects of connection establishment, Mode of connection, Bluetooth security, Security architecture, Security level of services, Profile and usage model: Generic access profile (GAP), SDA, Serial port profile, Secondary bluetooth profile

Hardware: Bluetooth Implementation, Baseband overview, packet format, Transmission buffers, Protocol Implementation: Link Manager Protocol, Logical Link Control Adaptation Protocol, Host control Interface, Protocol Interaction with layers

Programming with Java: Java Programming, J2ME architecture, Javax.bluetooth package Interface, classes, exceptions, Javax.obex Package: interfaces, classes

Bluetooth services registration and search application, bluetooth client and server application.

Overview of IrDA, HomeRF, Wireless LANs, JINI

**Text Books:**

1. “Bluetooth Technology”, C.S.R. Prabhu and A.P. Reddi; PHI
2. “Bluetooth Demystified”, Nathan J. Muller, Tata McGraw Hill, 2001

**Reference Book:**

**Code No. ITR – 743**

**Subject: Cyber Crime Investigations and Cyber Forensics**

<b>L</b>	<b>P</b>	<b>C</b>
<b>4</b>	<b>0</b>	<b>4</b>

Unit 1 : Introduction : Review of TCP/IP and TCP, IP Header analysis , Introduction to Cyber World, Cyber attacks and cyber security , Information warfare and cyber terrorism, Types of cyber attacks, Cyber Crime and Digital Fraud ,

Overview of Types of computer forensics i.e. Media Forensics, Network forensics (internet forensics), Machine forensic, Email forensic (e-mail tracing and investigations)

Unit 2 : Live Data collection and investigating windows environment : windows Registry analysis , Gathering Tools to create a response toolkit ( Built in tools like *netstat* , *cmd.exe* , *nbtstat* , *arp* , *md5sum* , *regdmp* etc and tools available as freeware like *Fport* , *Pslist* etc) , Obtaining volatile Data ( tools like *coffee* , *Helix* can be used )

Computer forensics in windows environment, Log analysis and event viewer, File auditing, identifying rogue machines, hidden files and unauthorized access points

Unit 3: Live Data collection and investigating Unix/Linux environment : /Proc file system overview , Gathering Tools to create a response toolkit ( Built in tools like *losetup* , *Vnode* , *netstat* , *df* , *md5sum* , *strace* etc and tools available as freeware like *Encase* , *Carbonite* etc )

Handling Investigations in Unix/Linux Environment: Log Analysis (Network, host, user logging details), Recording incident time/date stamps, Identifying rogue processes, unauthorized access points, unauthorized user/group accounts,

Unit 4 : Forensic tools and report generation: Recovery of Deleted files in windows and Unix , Analyzing network traffic , sniffers , Ethical Hacking , Hardware forensic tools like Port scanning and vulnerability assessment tools like *Nmap* , *Netscan* etc . Password recovery (tools like *John the ripper*, *L0phtcrack*, and *THC-Hydra*), Mobile forensic tools and analysis of called data record Template for computer forensic reports

The student will submit a synopsis at the beginning of the semester for approval to the project committee in a specified format. The student will have to present the progress of the work through seminars and progress report. A report must be submitted to the project committee for evaluation purpose at the end of the semester in a specified format.

**ITR – 752      Dissertation**

<b>L</b>	<b>T/P</b>	<b>C</b>
<b>0</b>	<b>0</b>	<b>24</b>

The student will submit a synopsis at the beginning of the semester for the approval from the project committee in a specified format. Synopsis must be submitted within two weeks. The first defense, for the dissertation work, should be held within two months time. Dissertation Report must be submitted in a specified format to the project committee for evaluation purpose at the end of semester.

**ITR – 754      Seminar & Progress Report**

<b>L</b>	<b>T/P</b>	<b>C</b>
<b>0</b>	<b>0</b>	<b>4</b>

Seminar is required to be given by the student on the topic of the dissertation. Progress of the dissertation will be evaluated based on the seminar given by the student during the semester. Evaluation will be done two times during the semester. Marks will be given based on the performance of the student during the seminar.
