# SCHEME OF EXAMINATION

&

# **DETAILED SYLLABUS**

# **FOR**

# BACHELOR OF TECHNOLOGY(B.TECH/M.TECH) DUAL DEGREE

FOR
ARTIFICIAL INTELLIGENCE AND DATA SCIENCE
(4+2 Years)
Offered at University School of Automation and Robotics
from Academic Session
2021-25 Batch

**University School of Automation and Robotics** 

GURU GOBIND SINGH INDRAPRASTHA UNIVERSITY, EAST DELHI CAMPUS, SURAJMAL VIHAR-110092

# **Programme Outcomes**

- **1.** *Engineering Knowledge* (PO01): Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **2.** *Problem Analysis* (PO02): Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **3. Design/Development of Solutions** (PO03): Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **4.** Conduct Investigations of Complex Problems (PO04): Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions for complex problems:
  - a) that cannot be solved by straightforward application of knowledge, theories, and techniques applicable to the engineering discipline as against problems given at the end of chapters in a typical textbook that can be solved using simple engineering theories and techniques;
  - b) that may not have a unique solution. For example, a design problem can be solved in many ways and lead to multiple possible solutions;
  - c) that require consideration of appropriate constraints/requirements not explicitly given in the problem statement such as cost, power requirement, durability, product life, etc.;
  - d) which need to be defined (modeled) within an appropriate mathematical framework; and
  - e) that often require the use of modern computational concepts and tools, for example, in the design of an antenna or a DSP filter
  - **5.** *Modern Tool Usage* (PO05): Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
  - **6.** The Engineer and Society (PO06): Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
  - 7. *Environment and Sustainability* (PO07): Understand the impact of professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
  - **8.** *Ethics* (PO08): Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
  - **9.** *Individual and Team Work* (PO09): Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
  - **10.** Communication (PO10): Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive

\_\_\_\_\_

clear instructions.

- 11. *Project Management and Finance* (PO11): Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **12.** *Life-long Learning* (PO12): Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

Approved by BoS of USAR: 01/08/2022, Approved by AC sub-committee:29/08/2022

Approved by BoS of USAR: 15/06/2023, Approved by AC sub-committee: 04/07/2023

East Delhi Campus, Surajmal Vihar Delhi - 110092

### **Course / Paper Group Codes:**

**BS:** Basic Sciences

HS: Humanities, Social Science, Management

**ES:** Engineering Sciences **MC:** Mandatory Courses

**PC:** Programme Core, which is course/paper offered in the discipline of the programme as a compulsory paper.

SC: School Core, which is course/paper offered in the discipline of the school as a compulsory paper

**PCE:** Programme Core Elective, that is elective course/paper offered in the discipline of the programme.

**OAE:** Open area elective offered by other schools or open/emerging area elective offered by the school. This allows the student to have two minor specializations also.

### **Definitions:**

Batch: The batch of the student shall mean the year of the first time enrolment of the students in the programme of study in the first semester. Lateral entry students admitted in the  $3^{\rm rd}$  semester /  $2^{\rm nd}$  year shall be designated as students admitted in the previous batch as they are admitted one year later. A student re-admitted in a programme of study in a lower/later batch shall be considered as the student of the original batch for calculation of the duration of the study.

Programme of study shall mean Bachelor of Technology.

### **Acronyms:**

**APC:** Academic programme committee comprising all faculty of the school.

L: Number of Lecture hours per week

**T/P:** Number of Tutorial / Practical Hours per week **C:** Number of credits assigned to a course / paper

**COE:** Controller of Examinations of the Examinations Division of the University.

**SGPA/CGPA:** Semester/Cumulative Grade Point Average.

**NUES:** No end term examination shall be held. The evaluation shall be conducted as per the scheme of examinations as described in the scheme of study.

## (NUES): Comprehensive evaluation by a committee of teachers, constituted by the Academic Programme Committee (APC), out of 100. The training shall be of 4 to 6 weeks duration. The training can be under the mentorship of a teacher of the school.

\*\*\* The student shall be allocated a supervisor/guide for project work at the start of 7th semester by the school, preferably, the project can be continued into the 8th semester. In the 7th semester evaluation, the criteria for evaluation shall be the conceptualization of the project work, the background study/literature survey and the identification of objectives and methodology to be followed for the project. In the absence of the supervisor, the Dean of the school can assign the responsibility of the supervisor (for the purpose of examinations) to any faculty of the school. The internal and external bifurcation of the project marks will be as per the bifurcation of marks for the practical examination.

### List of Open Area Electives (OAE) to be offered by USAR

- 1. Open Area Electives (OAE) courses shall be offered by the school (USAR) to all the Programs of B.Tech./M.Tech. (Dual Degree), i.e., AI&DS, AI&ML, A&R, IIoT.
- 2. An Open Area Elective (PCE) course shall be offered for at least 1/3rd of the total program strength.
- 3. The number of elective subjects on offer, may be augmented with prior permission of Chair, BOS.
- 4. A common list of OAEs is given below, however, the list will be augmented in future as per the industry scenario.
- 5. Paper offered as an Open Area Elective (OAE) to AIDS/ AIML / IIOT/ AR branches provided the prerequisite of the paper is satisfied by the student and the same paper is not a core / elective paper of the respective branch. The students may be allowed to study such subject with the approval of the APC of USAR, subject to the condition that the paper is offered in the particular semester by the school.

## Program Implementation Rules (B.Tech./M.Tech. Dual Degree)

- 1. The examinations, attendance criteria to appear in examinations, promotion and award of the degree shall be governed by the Ordinance-11 of the University. However, credits of courses/papers for OAE / PCE groups shall not be considered for the purpose of promotion from one year of study to the subsequent year of study.
- 2. The minimum duration of the Bachelor of Technology part of the Bachelor /Master of Technology (Dual Degree) programme shall be 4 years (N=4 years) (8 semesters). Lateral entry students shall be admitted in the 2<sup>nd</sup> year and 3<sup>rd</sup> semester of the degree programme (effectively in the batch admitted

Approved by BoS of USAR: 01/08/2022, Approved by BoS of USAR: 15/06/2023, Approved by AC sub-committee: 04/07/2023

Approved by AC sub-committee: 04/07/2023

in the first year in the previous academic session and shall be deemed to have been exempted from the courses/papers of the first year of the degree programme. No exemption certificate shall be issued in any case. A specific lateral entry student's minimum duration shall be the same as the minimum duration for the batch in which he/she is admitted as a lateral entry student in the  $2^{nd}$  year.

- 3. The maximum duration of the Bachelor of Technology part of the Bachelor / Master of Technology (Dual Degree) programme shall be 6 years (N+2 years). After completion of N+2 years of study, if the student has appeared in the papers of all the semesters up to the 8<sup>th</sup> semester, then a maximum extension of 1 year may be given to the student for completing the requirements of the degree if and only if the number of credits already earned by the student is at least 165 (128, in a case of LE Student) from the (non-honours components). Otherwise, the admission of the student shall stand cancelled. After the period of allowed study, the admission of the student shall be cancelled. A specific lateral entry student's maximum duration shall be the same as the minimum duration for the batch in which he/she is admitted as a lateral entry student in the 2nd year.
- 4. Only after qualifying for the award of the degree of Bachelor of Technology, the student may be allowed to proceed to the Master in Technology part of the Bachelor / Master of Technology (Dual Degree).
- 5. The scheme and syllabi of the Master of Technology part of the Bachelor / Master of Technology (Dual Degree) shall be notified separately. This document pertains to the Bachelor of Technology part of the Bachelor / Master of Technology (Dual Degree) programme only.
- 6. The students shall undergo the following group of Courses / Papers as enumerated in the scheme (*For the students admitted in the First Year / First Semester*):

Course Groups		Sei	nes	ter	(Cr	edi	ts)		Total Credits	Mandatory Credits	
course droups	1	2	3	4	5	6	7	8	Total Cicuits

MC					2				2	2
			27	27	26	30	29	23	162	137

**TABLE 2:** Distribution of Credits. (Project/internship credits are 28 out of the 107 credits for Programme Core (PC) credits, while extra-curricular activities credits are 2 out of 10 credits for humanities/management / social science group (HS)

- 7. Mandatory Credits, i.e. 175 (137, in the case of LE Student) specify the number of credits from each subject group to be mandatorily acquired by the student for the award of the degree. See clauses 12 and 13 also. Some of the papers are droppable in the sense that the student may qualify for the award of the degree even when the student has not cleared/passed some of the papers of these groups. However, the student has to earn the minimum credits for the programme of study as specified. See clauses 12 and 13 also.
- 8. The open electives of the OAE group of courses may also be taken through SWAYAM / NPTEL MOOCs platform. The student desirous of doing a MOOC-based course among the OAE group must seek approval from the APC of the school for the same before the commencement of the semester. The APC shall allow the MOOC-based OAE option to the student if and only if the MOOC subject/course being considered for the student is being offered in line with the Academic Calendar applicable. The student shall submit the successful completion certificate from the concerned MOOCs agency with marks to the School for onward transfer to the Examination Division. The Examinations Divisions shall take these marks on record for incorporation in the result of the appropriate semester. These marks/grades of these courses shall be used for calculation of the SGPA/CGPA of the student concerned by the examination division of the University. The degree to the student on fulfilment of other requirements for such cases shall be through clause 13. These MOOC courses taken by the students, if allowed by the APC of the school shall be of 3 credits or more collectively to be against or for one paper slot in the scheme, through MOOCs, though the marks shall be shown individually. That is in one paper slot in the scheme wherever a MOOC course is allowed, the student may register for more than one paper to aggregate 3 credits or more. If the credits of these MOOC Courses, allowed to a student is more than 3, then the maximum credit for the programme shall be as per the Program scheme. Also, in a particular semester, a student may take more than one MOOC course with the approval of the APC to meet the credit requirements of OAE for the

Approved by BoS of USAR: 01/08/2022, Approved by AC sub-committee: 29/08/2022
Approved by BoS of USAR: 15/06/2023, Approved by AC sub-committee: 04/07/2023

semester. The cost of taking the MOOC course is to be borne by the concerned student. The results of the MOOC courses shall be declared separately by the examination division from the result for the papers conducted by the examination division of the University.

- 9. To earn an Honours degree, the student may enrol for 20 credits or more through SWAYAM/ NPTEL MOOCs platform. This point has to be read together with other points especially points 13 and 14, The acquisition of the credits should be completed before the 15th of the July of the admission year plus 4 years (3 Years, in the case of LE Student). That is, if a student is admitted in the year X, then these credits must be acquired through MOOCs by 15th July of the year (X+4) (X+3, in the case of LE Student), no extra duration or time shall be allocated.
- 10. Honours in the degree shall be awarded if and only if at least 20 credits are acquired through MOOCs. To obtain Honours in the programme, the student must apply to the School about the same before the commencement of the 5th semester. The specific courses through MOOCs shall be registered by the student only after approval by the Academic Programme Committee (APC) of the School. The APC shall approve the course if it is not already studied by the student or the student shall not study it in future and adds value to the major area of specialization (which is the degree). The papers for which the student desires to appear for Honours through MOOCs, all papers results shall be submitted by the student to the school for onward transfer to the Examination Division of the University, to be taken on record of the University. The student must submit the passing certificate of the MOOC course. The results of these papers shall be a part of the records of the examinations of the students. The records shall be submitted by the student to the school, then transferred to the Examinations division, shall be notified by the examinations division of the University, and a separate mark sheet shall be issued by the Examinations divisions. The cost of taking the MOOC course is to be borne by the concerned student. Such courses shall be reflected as additional courses/papers for the student.
- If a student acquires less than 20 credits through MOOCs, following the mechanism specified, then also the results of these papers shall be taken on record as specified above, though no Honours degree shall be awarded.
- The papers through MOOCs for the Honours degree shall not be a part of the set of papers over which the SGPA / CGPA of the student shall be calculated.
- The papers through MOOCs for the Honours degree shall be additional papers studied by the students and are to be taken into account only for award of Honours in the degree programme, if 20 credits are earned through MOOCs as approved by APC, by a student. See Clause 14 also.
- 11. Maximum Credits: At least 220 (162, in the case of LE Student) (Table 1 & Table 2), these are the credits for which the student shall have to study for the non- Honours component of the curriculum. The student has to appear in the examinations for these credits.
- 12. Minimum Credits: At least 200 (145, in the case of LE Student) (out of the 220 and 162 non-Honours papers credits for Regular and LE students respectively). See clause 7 also.
- 13. The following degree route can be taken by a student for the award of Honours and Non-Honours Degree (also refer to point 14):

Approved by BoS of USAR: 01/08/2022, Approved by AC sub-committee:29/08/2022

Approved by BoS of USAR: 15/06/2023, Approved by AC sub-committee: 04/07/2023

- 1) The students shall be awarded the degree under the following conditions:
  - a) The student has earned the mandatory credits as defined in Table 1 and Clause 7.
  - b) In addition, the total credits (including the above-specified credits) earned by the student is at least 200 (145, in the case of LE Student) credits.

The degree nomenclature of the degree shall be as: "*Bachelor of Technology (Major Discipline*)"; if criterions/points 9 & 10 are not satisfied for Honours. Otherwise, if criterions/points 9 & 10 are met, then the degree shall be an Honours degree and the nomenclature shall be as: "*Bachelor of Technology (Major Discipline) (Honours)*", if in addition to point 13-1), student fulfils the criteria for Honours as specified at point 10.

- 2) For the award of an Honours Degree, a student has to earn 220 (162, in the case of LE Student) credits of the program and additional 20 Credits as per Clauses 9 & 10. However, if a student earns less than 220 (162, in the case of LE Student) credits along with 20 credits of MOOCs as per clauses 9 & 10, then that student will not be given the degree of Honours, and the degree awarded in that case shall be "Bachelor of Technology (Major Discipline)".
- 14. The Honours degree shall only be awarded if the CGPA of the student is above or equal to 7.5 in addition to fulfilment of criterions/points 9, 10 and 13 above and the degree is awarded after the immediate completion of the 4th of the batch from the year of admission. No Honours shall be conferred if the degree requirements are not completed in the minimum duration.
- 15. The scheme of examinations for the B.Tech. Programmes at the affiliated institutions shall be notified separately.
- 16. Pass marks in every paper shall be 40.
- 17. The grading System shall be as per Ordinance 11 of the University.
- 18. The students desirous to continue to the Master of Technology part of the dual degree programme, must first complete the requirements for the award of the Bachelor of Technology degree, before being allowed to proceed for the Master of Technology part.
- 19. Teachers of other Schools, as and when deputed by their school, for teaching the students enrolled in programmes offered by the University School of Automation and Robotics (USAR) shall be a part of the Academic Programme Committee of the school. Such teachers, for all academic matters, including teaching, teachers' continuous evaluation, term end examinations etc. shall be governed by the decisions of the APC of USAR. Similarly, the guest faculty, the visiting faculty and the contract / Ad Hoc faculty as and when deputed to teach students of USAR shall form a part of APC of USAR.
- 20. The medium of instructions shall be English.

Maximum Marks: 75

Paper code : ARD 201	L	T/P	C
Subject : Linear and Abstract Algebra	3	0	3

### **Marking Scheme**

- 1. Teachers Continuous Evaluation: 25 Marks
- **2.** End Term Theory Examination: 75 Marks

## **INSTRUCTIONS TO PAPER SETTERS:**

- 1. There should be 9 questions in the end term examination question paper
- 2. Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions. It should be of 15 marks.
- 3. Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit. Each question should be 15 marks.
- 4. The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/ level of the questions to be asked should be at the level of the prescribed textbooks.
- The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### Course Outcomes:

Course	outcomes.						
CO1:	Ability of students to utilize the first approach to the subject of algebra, which is one of the						
CO1.	basic pillars of modern mathematics.						
	Ability of students to implement algebraic statements about vector addition, scalar						
CO2:	multiplication, inner products projections, norms, orthogonal vectors, linear independence,						
	spanning sets, subspaces.						
CO3:	Ability of students to use certain structures called groups, some related structures along with						
CO3:	application of matrices.						
CO4:	Ability of students to depict good mathematical maturity and implement mathematical thinking						
CO4:	and skill.						

Course Outcomes (CO) to Programme Outcomes (PO) Mapping (Scale 1: Low, 2: Medium, 3: High

CO/PO	PO01	PO0	PO0	PO04	PO0	PO06	PO07	PO08	PO0	PO1	PO11	PO1

Unit II [6]

**Inner product spaces:** Inner product spaces, norm of a vector, Schwarz's inequality, normed vector space, orthonormal sets, Gram Schmidt orthogonalization process.

Unit III [6]

**Group theory:** Introduction to groups, definition and example of groups, elementary properties of groups. finite groups, subgroups and their examples, Cyclic groups. Permutation groups, Caley theorem, cosets, Lagrange's theorem, Normal subgroups and factor groups. Isomorphisms and homomorphisms.

Unit IV [14]

**Ring theory:** Definition and examples of rings, Properties of rings, Subrings, Integral domains.

Page | 19

Logical Agents: Knowledge-Based Agents, Logic, Propositional Logic, Propositional Theorem Proving, Effective Propositional Model Checking, Agents Based on Propositional Logic.

Classical Planning: Definitions of Classical Planning. Algorithms for Planning as State-Space Search. Planning Graphs. Other Classical Planning Approaches. Analysis of Planning Approaches. Planning and Acting in the Real World: Time, Schedule and Resources, Hierarchical Planning, Planning and Acting in Nondeterministic Domains, Multi-agent Planning.

Knowledge Representation: Ontological Engineering, Categories and Objects, Events, Mental Events and Mental Objects, Reasoning Systems for Categories, Reasoning with Default Information.

**Unit III** [13]

Probabilistic Reasoning: Representing Knowledge in an Uncertain Domain, Semantics of Bayesian Networks, Efficient Representation of Conditional Distribution, ExactInference and Approximate Inference in Bayesian Networks. Relational and First-order, Probability Models.

**Probabilistic Reasoning over Time**: Time and Uncertainty, Inference in Temporal Models, Hidden Markov Models, Kalman Filters, Dynamic Bayesian Networks, Keeping Track of Many Objects. Making Decisions: Making Simple Decisions – Combining Beliefs and Desires, Utility Theory, Utility Functions, Multi-attribute Utility Functions, Decision Networks, Decision-Theoretic Expert Systems. Sequential Decision Problems. Value Iteration, Policy Iteration. Partially Observable MDPs. Decisions with Multiple Agents

**Unit IV** [6]

Fuzzy Logic: Crisp Sets V/s Fuzzy Sets, Fuzzy Functions, Fuzzy Logic and Fuzzy Inference Systems, Type-2 Fuzzy Sets, Intuitionistic Fuzzy Sets based sentiment Analysis

Approved by BoS of USAR: 15/06/2023, Approved by AC sub-committee: 04/07/2023

Maximum Marks: 75

Paper code : ARD 211	L	T/P	C
Subject : Data Structures	4	0	4

### **Marking Scheme**

- 1. Teachers Continuous Evaluation: 25 Marks
- 2. End Term Theory Examination: 75 Marks

### **INSTRUCTIONS TO PAPER SETTERS:**

- 1. There should be 9 questions in the end term examination question paper
- 2. Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions. It should be of 15 marks.
- 3. Apart from Question No. 1, rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, student may be asked to attempt only 1 question from each unit. Each question should be 15 marks.
- 4. The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/ level of the questions to be asked should be at the level of the prescribed textbooks.
- 5. The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### Course Outcomes:

<b>CO1:</b>	Ability of students to understand the abstract data types						
CO2:	Ability of students to design, implement, and analyze linear data structures, such as lists,						
queues, and stacks, according to the needs of different applications							
<b>CO3:</b>	Ability of students to meet understand different types of searching, indexing, and sorting						
CO4:	Ability of students to design, implement, and analyze efficient tree structures and graph						
CO4:	structure.						

Mapping (Scale 1: Low, 2: Medium, 3: Course Outcomes (CO) to Programme Outcomes (PO) High

CO/PO	PO01	PO0	PO0	PO04	PO0	PO06	PO07	PO08	PO0	PO1	PO11	PO1

CO3	2	3	3	3	1	1	1	1	1	1	2	3
CO4	3	3	3	3	2	2	2	2	2	2	2	3

Unit I [8]

Abstract Data Types Abstract Data Types (ADTs), ADTs and classes, introduction to OOP, classes in Python, inheritance, namespaces, shallow and deep copying, Introduction to analysis of algorithms, asymptotic notations, recursion, analyzing recursive algorithms

Approved by BoS of USAR: 01/08/2022, Approved by AC sub-committee: 29/08/2022 Approved by BoS of USAR: 15/06/2023, Approved by AC sub-committee: 04/07/2023 Page | 27

Unit II [10]

**Linear Structures:** List ADT, array-based implementations, linked list implementations, singly linked lists, circularly linked lists, doubly linked lists, applications of lists, Stack and its array-based and link list based implementation, Queue and its array-based and link list based implementation, Two applications of Stack and Queue each, double ended queues

Unit III [10]

**Sorting And Searching:** Bubble sort, selection sort, insertion sort, merge sort, quick sort, linear search, binary search, hashing, hash functions, collision handling techniques, load factors, rehashing, and efficiency

Unit IV [12]

**Tree Structures:** Tree ADT, Binary Tree ADT, tree traversals, binary search trees, AVL trees, heaps, multiway search trees

**Graph Structures:** Graph ADT, representations of graph, graph traversals-BFS, DFS, DAG, topological ordering, Dijkstra's Shortest Path Algorithm, Minimum spanning trees Algorithms - Kruskal Algorithm, Prim's Algorithm

Design, Object Oriented Design, User Interface Design.

**Quality Assurance of Software Systems:** Testing Techniques for Software Systems: Black box and White box Testing, Regression testing, Reliability Modeling of Software Systems, Quality Assurance and Maintenance

Unit III [8]

**Measurement of Software Systems :** Metrics for Measurement of Software Systems, Direct Measurement, Indirect Measurement: Product Metrics: Product metrics Process Metrics, Project Metrics

**Software Configuration Management :** Change Requirements, Version control, Change management, scheduling, estimating, etc. Manual and Automatic Test Data Generation for Software Systems/Embedded Systems.

Unit IV [9]

**Object Oriented Software Engineering :** Introduction to Object-Orientation Identify Objects and Classes, Attributes, Methods, Object Relationships like Association, Aggregation and Composition Inheritance, Polymorphism and Dynamic Binding Interfaces

Unified Modeling Language (UML): Use Case Diagram, Class diagrams, State transition diagrams, Object diagrams, Interaction diagrams, Activity diagrams, Package diagram, Component diagram, Deployment diagram

Unit I [12]

3

**Introduction:** Introduction: What is an Operating System, Simple Batch Systems, Multiprogrammed Batches systems, TimeSharing Systems, Personal-computer systems, Parallel systems, Distributed Systems, Real-Time Systems, OS – A Resource Manager.

Memory Organization & Management: Memory Organization, Memory Hierarchy, Memory Management Strategies, Contiguous versus non- Contiguous memory allocation, Partition Management Techniques, Logical versus Physical Address space, swapping, Paging, Segmentation, Segmentation with Paging

Virtual Memory: Demand Paging, Page Replacement, Page-replacement Algorithms, Performance of Demand

Approved by BoS of USAR: 01/08/2022, Approved by AC sub-committee:29/08/2022 Approved by BoS of USAR: 15/06/2023, Approved by AC sub-committee: 04/07/2023

Paging, Thrashing, Demand Segmentation, and Overlay Concepts

Unit II [12]

Processes: Introduction, Process states, process management, Interrupts, Interprocess Communication

**Threads:** Introduction, Thread states, Thread Operation, Threading Models. Processor Scheduling: Scheduling levels, preemptive vs nonpreemptive scheduling, priorities, scheduling objective, scheduling criteria, scheduling algorithms, demand scheduling, real time scheduling.

**Process Synchronization:** Mutual exclusion, software solution to Mutual exclusion problem, hardware solution to Mutual exclusion problem, semaphores, Critical section problems. Case study on Dining philosopher problem.

Unit III [10]

**Deadlocks:** Examples of deadlock, resource concepts, necessary conditions for deadlock, deadlock solution, deadlock prevention, deadlock avoidance with Bankers algorithms, deadlock detection, deadlock recovery.

**Device Management:** Disk Scheduling Strategies, Rotational Optimization, System Consideration, Caching and Buffering

**File System:** Introduction, File Organization, Logical File System, Physical File System, File Allocation strategy, Free Space Management, File Access Control, Data Access Techniques, Data Integrity Protection.

Unit IV [6]

Virtualization: Introduction to Virtualization, Virtual Machine, Type of virtualization, Hypervisors

errors.

Unit II [12]

**Supervised learning**: Linear separability and decision regions, Linear discriminants, Bayes optimal classifier, Linear regression, Standard and stochastic gradient descent, Lasso and Ridge Regression, Logistic regression, Support Vector Machines, Perceptron, Back propagation, Artificial Neural Networks, Decision Tree Induction, Overfitting, Pruning of decision trees, Bagging and Boosting, Dimensionality reduction and Feature selection.

**Unsupervised learning**: Clustering, Mixture models, Expectation Maximization, Spectral Clustering, Non-parametric density estimation.

Unit III [10]

**Support Vector Machines**: Structural and empirical risk, Margin of a classifier, Support Vector Machines, Learning nonlinear hypothesis using kernel functions.

Unit IV [10]

**Evaluation**: Performance evaluation metrics, ROC Curves, Validation methods, Bias Variance decomposition, Model complexity.

**Introduction to Deep Networks**: Introduction to deep feedforward networks, convolutional neural networks, stacking, striding and pooling.

memorization. Matrix Chain Multiplication, Longest common subsequence and optimal binary search trees problems, 0-1 knapsack problem, Binomial coefficient computation through dynamic programming. Floyd Warshall algorithm.

Unit III [10]

Greedy Algorithms: Elements of Greedy strategy, overview of local and global optima, matroid, Activity selection problem, Fractional Knapsack problem, Huffman Codes, A task scheduling problem. Minimum Spanning Trees: Kruskal's and Prim's Algorithm, Single source shortest path: Dijkstra and Bellman Ford Algorithm(with proof of correctness of algorithms). The naïve String Matching algorithm, The Rabin-Karp Algorithm, String Matching with finite automata, The Knuth-Morris Pratt algorithm.

Unit IV [10]

Tractable and Intractable Problems: NP-Complete Problem: Polynomial-time verification, NP-Completeness and Reducibility, NP-Completeness Proof, NP –hard ,Case study of NP-Complete problems (vertex cover problem, clique problem).

Applicable from Batch admitted in Academic Session 2021-22 Batch Page | 38

Unit II [12]

Principles of Dimensional Modeling: Objectives, From Requirements to data design, Multi Dimensional Data Model, Schemas: the STAR schema, the Snowflake schema, fact constellation schema.

OLAP in the Data Warehouse: Demand for Online Analytical Processing, limitations of other analysis methodsOLAP is the answer, OLAP definitions and rules, OLAP characteristics, major features and functions, hypercubes.

OLAP Operations: Drill-down and roll-up, slice-and-dice, pivot or rotation, OLAP models, overview of variations, the MOLAP model, the ROLAP model, the DOLAP model, ROLAP versus MOLAP, OLAP implementation considerations. Query and Reporting, Executive Information Systems (EIS), Data Warehouse and Business Strategy.

Unit III [10]

Data Mining Basics: What is Data Mining, Data Mining Defined, The knowledge discovery process (KDD Process), Data Mining Applications- The Business Context of Data Mining, Data Mining for Process Improvement, Data Mining as a Research Tool, Data Mining for Marketing, Benefits of data mining, Major Data Mining Techniques: Classification and Prediction: Issues Regarding Classification and Prediction, Classification by Decision Tree Induction, KNN Algorithm.

Unit IV [10]

Cluster detection, K- means Algorithm, Outlier Analysis, memory-based reasoning, link analysis, Mining Association Rules in Large Databases: Association Rule Mining, genetic algorithms, neural networks, Data mining tools.

- 5. The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### Course Outcomes:

CO1:	Ability of students to translate the problem given in descriptive form into a mathematical
COI:	model.
CO2:	Ability of students to examine and evaluate various optimization problems according to their
CO2.	characteristics.
<b>CO3</b> :	Ability of students to adopt scientific approach for analyzing problems and making decisions.
CO4:	Ability of students to practically implement knowledge gained from various optimization
CO4.	methods for solving linear and nonlinear mathematical models.

Course Outcomes (CO) to Programme Outcomes (PO) Mapping (Scale 1: Low, 2: Medium, 3: High

CO/PO	PO01	PO0	PO0	PO04	PO0	PO06	PO07	PO08	PO0	PO1	PO11	PO1
		2	3		5				9	0		2

CO3	3	3	3	3	2	2	2	2	2	2	2	3
CO4	3	3	3	3	2	2	2	2	2	2	2	3

Unit I [10]

### **Unit 1: Linear programming:**

Fundamental theorem of linear programming, Simplex methods, Method of artificial variables, Degeneracy and Cycling, Simplex tableau in the condensed form, Duality, Complementary slackness conditions, Dual simplex method.

Approved by BoS of USAR: 01/08/2022, Approved by AC sub-committee:29/08/2022 Approved by AC sub-committee: 04/07/2023 Approved by BoS of USAR: 15/06/2023, Applicable from Batch admitted in Academic Session 2021-22 Batch Page | 40

Unit II [10]

### **Transportation and assignment problems:**

Transportation problem, Balanced transportation problem, Unbalanced transportation problem, Assignment problem, Hungarian method for assignment problem, Dual interpretation of Hungarian method.

Unit III [10]

### Optimality conditions and duality in non-linear programming:

Convex functions and their properties, convex optimization problems, feasible directions and linearizing cone, Basic constraint qualification, Lagrangian and Lagrange multipliers, Karush-Kuhn- Tucker necessary/sufficient conditions, Duality in nonlinear programming.

Unit IV [10]

### **Un-constraints optimization problems:**

Basic scheme and certain desirable properties, line search method for unimodal functions, the Steepest decent method, Newton's method, modified Newton's method, Conjugate gradient method.

Paper code : ARM 301	L	T/P	Credits
Subject: Theory of Computation	4	0	4

### **Marking Scheme:**

Teachers Continuous Evaluation: As per university examination norms from time to time. End Term Theory Examination: As per university examination norms from time to time.

### INSTRUCTIONS TO PAPER SETTERS: Maximum Marks: AS per University norms

- > There should be 9 questions in the end term examination question paper
- ➤ Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions.
- Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit.
- The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/level of the questions to be asked should be at the level of the prescribed textbooks.
- The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### **Course Outcomes:**

**CO1:** Describe Automata (Deterministic and Non-Deterministic) and Language Theory [K1].

**CO2:** Analyze and understand the equivalence between Context-Free Grammars (CFGs) and Push Down Automata (PDAs). **[K2,K4]** 

**CO3:** Demonstrate Turing Machines and analyze their equivalence with various Turing Machine formalisms. **[K3,K4]**.

CO4: Understand and discuss complexity classes such as P, NP, co-NP, PSPACE, and NPSPACE. [K2].

Course Content	No. Of Lectures
Unit I Automata and Language Theory: Chomsky Classification, Finite Automata, Deterministic Finite Automata (DFA), Non-Deterministic Finite Automata (NFA), Regular Expressions, Equivalence of DFAs, NFAs and Regular Expressions, Minimizing DFA, Closure properties of Regular grammar, Non-Regular Languages, Pumping Lemma for regular languages.	[10]
Unit II	[10]

Context Free Languages: Context Free Grammar (CFG), Parse Trees, Push Down Automata (deterministic and non-deterministic) (PDA), Equivalence of CFGs and PDAs, Closure properties of CFLs, Pumping Lemma for context free languages, Parsing, LL(K) grammar.	
Unit III  Turing Machines and Computability Theory: Definition, design and extensions of Turing Machine, Equivalence of various Turing Machine Formalisms.Church – Turing Thesis, Decidability, Halting Problem, Reducibility and its use in proving undecidability. Rices theorem. Undecidability of Posts correspondence problem., Recursion Theorem.	[10]
Unit IV Complexity Theory: The class P as consensus class of tractable sets. Classes NP, co-NP. Polynomial time reductions. NP-completess, NP-hardness. Cook- Levin theorem (With proof). Space complexity, PSPACE and NPSPACE complexity classes, Savitch theorem (With proof). Probabilistic computation, BPP class. Interactive proof systems and IP class. relativized computation and oracles.	[10]

CO4	3	3	3	3	2	2	1	1	1	3	2	3

Course Content	No of lectures
Unit I Language in Cognitive Science: Definitions of language, Language as a rule-governed dynamic system, Knowledge of language, Modes of language: spoken and written, Language system as expression and content Language Analysis and Computational Linguistics: What is Language Analysis?, Form, Function and Meaning in Language Analysis, Levels of Linguistic Analysis: Phonetics, Phonology, Morphology, Syntax, Semantics, Discourse, Pragmatics, Lexicology Shallow Parsing and Tools for NLP: Morphological Analysis, Tokenization & PoS Tagging, Chunking & Multi word expression (MWE), Named-Entity Recognition, Lemmatizer & Stemming, Morphological Synthesis	

Deep Parsing and Tools for NLP: Syntactic Parsing Techniques and algorithms, Semantic Parsing, Information Extraction, Automatic Summarization, Anaphora Resolution, Pragmatics and Discourse analysis	
Unit II  Text Classification: Bag of words representation. Vector space model and cosine similarity. Relevance feedback and Rocchio algorithm. Versions of nearest neighbor and Naive Bayes for text, Text Classification Using Support Vector Machine (SVM), Statistical Parsing Language Learning: Classification problems in language: word-sense disambiguation, sequence labelling. Hidden Markov models (HMM's). Veterbi algorithm for determining most-probable state sequences, Training the parameters of HMM's. Use of HMM's for speech recognition.	[10]
Unit III  NLP with ANN: Issues in using ANN with text, understanding word and sentence embedding, Introduction to NLTK, Binary encoding, TF, TF-IDF encoding, Latent Semantic analysis encoding, Latent Dirichlet Allocation, Word2Vec models (Skip-gram, CBOW, Glove, one hot Encoding), Sequence-to-sequence models (Seq2Seq) - GloVe: Global Vectors for Word Representation	[10]
Unit IV Speech Processing: Articulatory Phonetics, Speech Sounds and Phonetic Transcription, Acoustic Phonetics, Phonology, Computational Phonology, Automatic Speech Recognition (ASR), Speech Recognition Approaches, Text to Speech (TTS) system, Speech Synthesis Approaches NLP Applications: Lexicon, Dictionaries, thesaurus, Transliteration, Spell Checker, Grammar Checker, Domain identification, Language identification, Auto suggest/ Auto complete, Machine Translation, Question answering & dialogue agents, OCR, Hand Writing Recognition, Sentiment analysis	[10]

- There should be 9 questions in the end term examination question paper
- ➤ Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions.
- ➤ Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit.
- The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/level of the questions to be asked should be at the level of the prescribed textbooks.
- The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### Course Outcomes [Bloom's Knowledge Level (KL)]:

**CO1:** Ability of students to understand the concept of social media analytics and understand its significance.

CO2: Ability of students to develop skills required for analyzing the effectiveness of social media.

**CO3:** Ability of students to use different tools of social media analytics.

**CO4:** Ability of students to acquire the fundamental perspectives and hands-on skills needed to work with social media data.

# DETAILED SYLLABUS FOR PROGRAM CORE ELECTIVE-AIDS OF 5<sup>TH</sup> SEMESTER

Approved by BoS of USAR : 15/06/2023, Approved by AC sub-committee: 04/07/2023

Applicable from Batch admitted in Academic Session 2021-22 Batch Page | 60

Paper code : ARD 309	L	P	Credit
Subject : Pattern Recognition	4	0	4

### **Marking Scheme:**

Teachers Continuous Evaluation: As per university examination norms from time to time. End Term Theory Examination: As per university examination norms from time to time.

### **INSTRUCTIONS TO PAPER SETTERS: Maximum Marks: AS per University norms**

- > There should be 9 questions in the end term examination question paper
- ➤ Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions.
- Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit
- The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/level of the questions to be asked should be at the level of the prescribed textbooks.
- > The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### Course Outcomes [Bloom's Knowledge Level (KL)]:

CO1: To understand a good knowledge of Bayesian decision theory and Bayesian learning. [K1,K2]

CO2: To describe fundamental classifiers such as linear discriminant function, quadratic discriminant function, nearest neighbor rule, neural network and SVM.[K1, K2]

CO3: To understand and apply feature selection algorithms. [K1,K2,K3]

CO4: To analyze the performance of various classifiers on real-world datasets. [K4]

CO4	3	3	3	2	3	-	-	-	-	-	-	-

Course Content	No. of Lectures
Unit I	
Computer Organization concepts: Stored Program Organization, Computer Registers,	
Machine language instructions, addressing modes, Instruction formats, Arithmetic Logic Unit,	
Data path, Design of Control Unit, Instruction pipelining concepts.	
Introduction to microprocessors – Single Chip CPU, Microprocessors Evolution, Trends in	
Microprocessor Technology.	[10]

### Unit II

**Study 8-bit microprocessor8085-**Architecture and Programming Model of 8085 Microprocessor, PIN Layout and description of Signals, Power supply requirements and system clock, Basic Interfacing Concepts, Memory mapped I/O, Instruction Set of 8085, Data transfer, Arithmetic, Logical and branch instructions, Format of 8085 machine instructions, Instruction Execution and Timing diagram, Example of an 8085 – based microcomputer board.

**Assembly Language Programming of 8085-** Counters and Time delays, Stacks and Subroutines, Code Conversion, BCD Arithmetic, implementing 16-bit operations on 8-bit microprocessor, implementing 8085 programs using a single board computer, writing programs using an assembler

[12]

### Unit III

Methods of Data Transfer and Interrupt Structure of 8085- Data transfer mechanisms, Memory mapped and I/O mapped data transfer, Programmed data transfer, Parallel data transfer, Serial data transfer, RS-232 standard, RS-485 standard, GPIB/IEEE 488 standard, Interrupt driven data transfer, Interrupt Structure of 8085, RST instructions, Multiple interrupts and priorities, 8085 vectored interrupts, Direct Memory access concepts.

**Interfacing of Memory devices with 8085**-Generation of control signals for memory, Interfacing EPROM and RAM chips with 8085 Interfacing data converters with 8085-Interfacing 8-bit D/A and 8-bit A/D converters with 8085 using status check and interrupts.

[10]

### Unit IV

**Programmable peripheral devices and their Interfacing with 8085-** 8255 programmable peripheral interface, operating modes, control words, Interfacing switches and LEDs, Interfacing A/D and D/A using 8255, Waveform generation, 8279 Keyboard and display controller, Interfacing seven segment displays and matrix keyboards, 8254 Programmable Interval Timer, 8259 Programmable Interrupt Controller, 8237 DMA Controller. Serial I/O and Data Communication, Asynchronous Serial I/O, Hardware Controlled Serial I/O using 8251

[10]

### Text Books:

[T1] TRamesh Gaonkar, Microprocessor Architecture, Programming, and application with 8085, Sixth Edition, Penram International Publication, 2013.

Paper code : ARD 314T	L	P	Credit
Subject : Introduction to Computer Vision	4	0	4

### **Marking Scheme:**

Teachers Continuous Evaluation: As per university examination norms from time to time. End Term Theory Examination: As per university examination norms from time to time.

### INSTRUCTIONS TO PAPER SETTERS: Maximum Marks: AS per University norms

- > There should be 9 questions in the end term examination question paper
- ➤ Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions.
- Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit.
- The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/level of the questions to be asked should be at the level of the prescribed textbooks.
- > The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### **Course Outcomes:**

**CO1:** To introduce students the fundamentals of image formation.

Approved by BoS of USAR : 15/06/2023, Approved by AC sub-committee: 04/07/2023

Applicable from Batch admitted in Academic Session 2021-22 Batch Page | 76

Delhi - 110092

CO2: To introduce students the major ideas, methods, and techniques of computer vision and pattern recognition.

CO3: To develop an appreciation for various issues in the design of computer vision and object recognition systems.

**CO4:** To provide the student with programming experience from implementing computer vision and object recognition applications.

### **Course Content**

### Unit I

**Web Basics and Overview:** Introduction to web applications, HTML, Client Side Scripting Vs Server Side Scripting, Web Servers: Local Servers and Remote Servers, Installing Web servers, Internet Information Server (IIS), XAMPP, and NGINX web servers. Static website vs Dynamic website development.

**Client side Scripting:** Introduction to JavaScript: JavaScript language – declaring variables, scope of variables functions, event handlers (on click, on submit etc.), Document Object Model, Form validations. Simple AJAX applications.

[13]

### Unit II

**Basics of Go Language:** Basic data types, composite types, functions and Go methods, Goroutines and channels. receiving and processing requests, generating HTML responses with templates, Interfacing with databases.

[10]

### Unit III

**Go Lang and Web Applications:** Using Go for web applications, How web applications work, Go net/HTTP library, request and response, HTML Forms and Go, ResponseWriter, cookies, Handler and templates and Template engine, nesting templates.

**Data model:** In-memory storage, File storage, Go and SQL, Go and SQL relationships, Go relational mappers.

[12]

### **Unit IV**

**Go Lang and its applications through case study:** Introduction to web services, SOAP and REST based web services, parsing and creating XML with Go, parsing and creating JSON with Go, Creating Go web services.

A Case study of a test web application through Go and MongoDB/MySQL.

[10]

CO4	2	3	2	3	2	1	2	1	2	1	3	3

### **Course Content**

### Unit I

**Introduction.** Classes of difficult problems (planning, assignment, selection, adaptation, prediction) and corresponding search spaces. Classes of metaheuristics. The overall structure of a metaheuristic algorithm.

**Trajectory-based metaheuristics**. Deterministic local search (Pattern Search, Nelder Mead). Random local search (Matyas and Solis-Wets algorithms). Global search (restarted local search, iterated local search, simulated annealing, tabu search, variable neighborhood search etc).

[10]

### Unit II

**Population-based metaheuristics.** Overall structure. Main components (exploration and exploitation operators). **Operators for evolutionary algorithms:** mutation, crossover, selection. Encoding types. Genetic algorithms, evolution strategies, evolutionary programming, genetic programming.

**Swarm Intelligence.** Ant colony optimization. Particle swarm optimization. Artificial bee colony

[10]

### Unit III

**Difference-based and Probabilistic Algorithms.** Differential Evolution, Population Based Incremental Learning, Estimation of Distribution Algorithms, Bayesian Optimization Algorithms.

**Scalability of Metaheuristic Algorithms.** Cooperative coevolution. Parallel models for population-based metaheuristics (master-slave, island, cellular).

[10]

### Unit IV

**Multi-objective/ multi-modal/ dynamic optimization.** Particularities of multi-objective optimization (non-domination, Pareto front etc). Apriori and aposteriori techniques. Quality metrics. Multi-modal optimization and specific approaches (niching, sharing etc). Techniques for dynamic optimization (hyper-mutation, random immigrants, ageing mechanisms).

Applications of metaheuristic algorithms for: neural networks design, data mining, scheduling.

[10]

### **Marking Scheme:**

Teachers Continuous Evaluation: As per university examination norms from time to time. End Term Theory Examination: As per university examination norms from time to time.

### **INSTRUCTIONS TO PAPER SETTERS: Maximum Marks: AS per University norms**

- > There should be 9 questions in the end term examination question paper
- ➤ Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions.
- Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit.
- The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/ level of the questions to be asked should be at the level of the prescribed textbooks.
- The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### **Course Outcomes:**

**CO1:** Ability to create different neural networks of various architectures both feed forward and feed backward.

**CO2:** Ability to perform the training of neural networks using various learning rules.

**CO3:** Ability to perform the testing of neural networks and do the perform analysis of these networks for various pattern recognition applications.

**CO4:** Ability to related artificial neural networks with real life problems.

CO4	3	3	3	3	3	-	-	-	1	2	2	3

### **Course Content**

### Unit I

Definition and Origin of Cyber Physical System: C's of Cyber-Physical Systems (CPS) in the real world; Understanding CPS drivers, challenges, foundations, and emerging directions Dynamical Systems: stability and performance; Different notions of stability; Controller Design techniques; Logic based system specification; Controller Synthesis as a logic problem; Tools and Tutorials: System modeling, Control design, stability, Z3 solver Modeling complex interactions across cyber and physical domains

[12]

Unit II Real time scheduling theory; CAN bus scheduling; Wireless CPS; Packet drops and their effects on stability/performance; Delay/Deadline-miss aware control design; Tools and Tutorials: Truetime/Jittertime, CAN tools, WSN-CPS simulation with drops, Example of miss aware control	[10]
Unit III Safe Reinforcement learning for CPS; CPS: Cooperative driving; Attack detection and mitigation in CPS; Smart Grid Security and Privacy: Automated Generation Control attacks and privacy aware metering; Securing CPS: preventing "man-in-the-middle" and other attacks	[10]
Unit IV  Tools and Tutorials on: Use of OpenAI-gym, Carla, Matlab for safe-RL/MPC based autonomous driving, Ventos/SUMO for Cooperative driving, Matlab for power system loop modeling  Case Study:  1. Building life-critical, context-aware, networked systems of medical devices  2. Creating energy grid systems that reduce costs and fully integrate renewable energy sources	[12]

CO4	3	3	3	3	2	2	1	2	1	3	2	3

### **Course Content**

### Unit I

Essence of Cryptography, Mathematics of Cryptography, Threats and Attacks: Active and Passive Attacks. Symmetric and Asymmetric Cryptography, Classical Encryption techniques: Monoalphabetic and Polyalphabetic Cipher Technique: Caesar Cipher, Autokey Cipher, Vigenere Cipher, Rail Fence Cipher, Affine Cipher. Social Cryptographic Techniques:- Triplicative, Quadraplicative and Pentaplicative Cipher Technique. Cross Language Cipher Technique and Bi-Lingual Cross Language Cipher Technique

[12]

### **Unit II**

Key Management – Diffie - Hellman key Exchange Algorithm. Symmetric and Asymmetric Cryptography Algorithms: Data Encryption Standard(DES), Advanced Encryption Standard (AES) and RSA Algorithm.

[10]

Unit III	
Authentication Applications: Kerberos – X.509, PGP, S/MIME – Penetration Testing. Web Security. Hashing Algorithm: MD 5 and SHA. USage of FOSS Java Cryptography Architecture(JCA) and JSSE(Java Secure Socket Extension Programming) in security.	
	[12]
Unit IV	
Case Studies: Application of Supervised and Non-Supervised Learning Algorithms to design and develop Symmetric or Asymmetric Cyber Security Techniques.	[10]

CO4	3	3	2	3	2	1	2	1	1	1	2	3

### **Course Content**

### Unit I

Overview of text retrieval systems, Boolean retrieval, The term vocabulary and postings lists, Dictionaries and tolerant retrieval, Index construction and compression, Retrieval models and implementation: Vector Space, Models, Vector Space Model, TF-IDF Weight, Evaluation in information retrieval.

[12]

### Unit II

Query expansion and feedback, Relevance feedback, pseudo relevance feedback, Query Reformulation, Probabilistic models; statistical language models, Okapi/BM25; Language models, KL-divergence.

[10]

### **Unit III**

Text classification & Text clustering, The text classification problem, Naive Bayes text classification, k- nearest neighbors, Support vector Machine, Feature Selection, Vector-space clustering; K-means algorithm Hierarchical clustering, DBSCAN algorithm, PAM and PAMK, EM algorithm.

### **Unit IV**

Web search basics, crawling, indexes, Link analysis, Web Characteristic, Crawling, Web As a graph, Page Rank, Hubs and Authorities, IR applications, Information extraction, Question answering, Opinion summarization, Social Network.

[10]

### **Text Books:**

- [T1] Christopher D. Manning, Prabhakar Raghavan and Hinrich Schütze, Introduction to Information Retrieval, Cambridge University Press. 2008.
- [T2]ChengXiang Zhai, Statistical Language Models for Information Retrieval (Synthesis Lectures Series on Human Language Technologies), Morgan & Claypool Publishers, 2008.

### **Reference Books:**

[R1] Manning, C. D. (2009). An introduction to information retrieval. Cambridge university press.

Paper code : ARD 417	L	T/P	С
Subject : Time Series Analysis and Forecasting	4	-	4

### **Marking Scheme:**

Teachers Continuous Evaluation: As per university examination norms from time to time. End Term Theory Examination: As per university examination norms from time to time.

### **INSTRUCTIONS TO PAPER SETTERS: Maximum Marks: AS per University norms**

- > There should be 9 questions in the end term examination question paper
- ➤ Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions.
- Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit.
- The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/ level of the questions to be asked should be at the level of the prescribed textbooks.
- > The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### **Course Outcomes [Bloom's Knowledge Level (KL)]:**

CO1: Ability of students to understand the basic introduction to modern time series analysis and their applications in various fields [K1, K2, K3]

CO2: Ability of students to apply stationary and non-stationary time series models [K3,K4,K5]

CO3: Ability of students to learn multivariate stationary time series models and forecast future trends of a time series [K2, K3, K4]

CO4: Ability of students to learn ARCH and GARCH models with its applications [K2, K3,K4]

CO/PO	PO01	PO02	PO03	PO04	PO05	PO06	PO07	PO08	PO09	PO10	PO11	PO12

CO2	3	3	3	3	3	-	-	-	2	-	-	3
CO3	3	3	3	3	3	-	-	-	1	-	-	2
CO4	3	3	3	3	3	-	-	-	1	-	-	3

### **Course Content**

### Unit I

Introduction to time series with examples, stochastic process, Models with trends and seasonality, stationary models, autocorrelation functions and partial autocorrelation functions, Linear Processes, Random walks, Moving Average Processes, Autoregressive processes, ARMA models, ACF and PACF of ARMA

[12]

### Unit II

Non stationary models, ARIMA models, seasonality in ARIMA models, Wold decomposition theorem, Forecasting: extrapolation and exponential smoothening, box-Jenkins Methodology, Deterministic and stochastic trend models, Unit root processes, Dickey Fuller and Augmented Dickey-Fuller Test

[12]

Approved by BoS of USAR: 15/06/2023, Approved by AC sub-committee: 04/07/2023

CO3	-	3	1	3	3	-	-	-	-	3	2	3
CO4	-	3	2	3	3	-	-	-	-	3	3	2

### **Course Content**

### Unit I

**Introduction:** Why Semantics-Data integration across the web, Traditional data modeling methods, semantic relationships, metadata, Building models, Calculating with knowledge, Exchanging information, Semantic web technology.

[10]

### Unit II

**RDF Resource description language:** Simple Ontology in RDF and RDF schema- Introduction, syntax for RDF, advanced features, Simple ontology in RDF schemas.

**RDF** Formal semantics: Why semantics, Model theoretic semantic for RDF(S), Semantic reasoning with deduction rules, the semantic limits of RDF(S)

[12]

Unit III	
Web Ontology Languages (OWL): OWL syntax and intuitive semantics, owl species,	
Description logics, Model theoretic semantics of owl, Automated Reasoning with OWL.	
Source   S	[8]
Unit IV	
Rules and Queries: Ontology and Rules-What is Rule, Data log as a first order rule language,	
Combining Rules with OWL-DL, Rule interchange format RIF.	
Query Language: SPARQL-Query language for RDF, Conjunctive queries for OWL-DL.	[10]

- Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit.
- The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/ level of the questions to be asked should be at the level of the prescribed textbooks.
- > The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### **Course Outcomes [Bloom's Knowledge Level (KL)]:**

CO1: Understanding basics of Testing process and various black box testing techniques [K1,K2]

CO2: Understanding and Implementing White Box Testing Techniques. [K4]

CO3: Test Case Generation from requirements and Regression testing techniques. [K4]

**CO4:** Test Case generation for web application and object oriented software. Automation of test data generation. **[K3]** 

CO/PO	PO01	PO02	PO03	PO04	PO05	PO06	PO07	PO08	PO09	PO10	PO11	PO12

CO4	3	3	3	3	3	3	-	-	2	3	-	3

### **Course Content**

### Unit I

**Introduction:** Testing Process, Terminologies: Error, Fault, Failure, Test Cases, Testing Process, Limitations of Testing, Graph Theory: Graph, Matrix representation, Paths and Independent paths, Generation of graph from program, Identification of independent paths.

**Functional Testing:** Boundary Value Analysis, Equivalence Class Testing, Decision Table Based Testing, Cause Effect Graphing Technique.

[12]

### Unit II

**Structural Testing:** Control flow testing, Path testing, Data Flow Testing, Slice based testing, Mutation Testing

**Software Verification:** Verification methods, SRS verification, SDD verification, Source code reviews, User documentation verification, Software project audit,

## University School of Automation and Robotics GURU GOBIND SINGH INDRAPRASTHA UNIVERSITY

### East Delhi Campus, Surajmal Vihar Delhi - 110092

T	m:4	TTT	
	mu		

### **Creating Test Cases from Requirements and use cases:**

Use case diagram and use cases, Generation of Test cases from use cases, Guidelines for generating validity checks, Strategies for data validating, Database testing,

**Regression Testing:** What is Regression Testing?, Regression test cases selection, Reducing the number of test cases, Risk analysis, Code coverage prioritization technique

Software Testing Activities: Levels of Testing, Debugging, Software Testing Tools, and Software test Plan

[10]

### Unit IV

**Object oriented Testing:** What is Object orientation?, What is Object Oriented testing?, Path Testing, State Based Testing, Class Testing.

**Web Applications:** What is Web testing?, Functional Testing, User interface Testing, Usability Testing, Configuration and Compatibility Testing, Security Testing, Performance Testing, Database testing, Post Deployment Testing, Web Metrics

**Automated Test Data Generation:** What is automated test data generation? Approaches to test data generation, Test data generation, using genetic algorithm, Test Data Generation Tools.

	No of
Course Content	Lectures
Unit I	
Introduction to E-Commerce: Definition, Scope of E-Commerce, Hardware requirements,	
E-Commerce and Trade Cycle, Benefits and limitations of E-Commerce, generic framework	
for E-Commerce, Architectural framework of Electronic Commerce, Web based E Commerce	
Architecture, Electronic Markets, Electronic Data Interchange and Internet Commerce.	[12]
Unit II	
Benefits of EDI, EDI technology, EDI standards, EDI communications, EDI Implementation,	
EDI Agreements, EDI Security. Electronic Payment Systems, Need of Electronic Payment	
System: use of Electronic Payment system and the protocols used, Electronic Fund Transfer	
and secure electronic transaction protocol for credit card payment. Digital economy: Identify	
the methods of payments on the net – Electronic Cash, cheques and credit cards on the Internet.	[12]

Unit III Security in E Commerce Threats in Computer Systems: Virus, Cyber Crime Network Security: Encryption, Protecting Web server with a Firewall, Firewall and the Security Policy, Network Firewalls and Application Firewalls, Proxy Server.	I I
Unit IV Issues in E Commerce Understanding Ethical, Social and Political issues in E-Commerce: A model for Organizing the issues, Basic Ethical Concepts, Analyzing Ethical Dilemmas, Candidate Ethical principles Privacy and Information Rights: Information collected at E-Commerce Websites, The Concept of Privacy, Legal protections Intellectual Property Rights: Types of Intellectual Property protection, Governance.

Paper code : ARD 427	L	T/P	С
Subject : Compiler Design	4	-	4

### **Marking Scheme:**

Teachers Continuous Evaluation: As per university examination norms from time to time. End Term Theory Examination: As per university examination norms from time to time.

### **INSTRUCTIONS TO PAPER SETTERS: Maximum Marks: AS per University norms**

- > There should be 9 questions in the end term examination question paper
- ➤ Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions.
- Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit.
- The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/ level of the questions to be asked should be at the level of the prescribed textbooks.
- > The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### **Course Outcomes:**

CO1: Discuss the major phases of compilers and use the knowledge of the Lex tool. [K1,K2]

CO2: Develop the parsers and experiment with the knowledge of different parsers design without automated tools. [K1,K2,K3]

CO3: Describe intermediate code representations using syntax trees and DAG's as well as use this knowledge to generate intermediate code in the form of three address code representations. [K1,K2]

**CO4:** Classify various storage allocation strategies and explain various data structures used in symbol tables. **[K1,K2]** 

CO/PO	PO01	PO02	PO03	PO04	PO05	PO06	PO07	PO08	PO09	PO10	PO11	PO12

CO4	3	3	3	3	2	-	-	-	1	2	1	3

### **Course Content**

**Translators:** Introduction to compilers, translators, and interpreters, compilation process. **Lexical Analysis:** Finite automata, Regular expressions, Design & implementation of lexical analysers.

[10]

### **Unit II**

**Syntax Analysis:** Context Free Grammars, Derivation and Parse trees, Bottom-up and Top-down Parsing. Ambiguity, Shift Reduce Parser, Operator Precedence Parser, Predictive Parsers, canonical collection of items, LR parsers.

[15]

Unit III Syntax directed translation: Syntax directed translation, Attributes, Intermediate codes, Three address codes. Symbol table organization: Hashing, linked list, tree structures. Memory allocation: Static and dynamic structure allocation	[10]
Unit IV  Code optimization: Basic blocks, Flow graphs, DAG, Global data flow analysis – ud-chaining, available expressions, Loop optimization. Code generation: Compilation of expression and control structures. Error detection and recovery.	[8]
Text Books:  [T1] Aho, Ullman and Sethi: Compilers – Principles, techniques and tools, Pearson Education.  [T2]Tremblay, Sorenson: The Theory and Practice of Compiler Writing, BSP.

# DETAILED SYLLABUS FOR OPEN AREA ELECTIVE AIDS/AIML/IIOT/AR

------

Paper Code: ARO 371	L	T/P	Credits
Subject: 3D-Printing Technologies	3	0	3

### **Marking Scheme:**

Teachers Continuous Evaluation: As per university examination norms from time to time. End Term Theory Examination: As per university examination norms from time to time.

### **INSTRUCTIONS TO PAPER SETTERS: Maximum Marks: As per University norms**

- > There should be 9 questions in the end term examination question paper
- ➤ Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions.
- Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit.
- > The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/level of the questions to be asked should be at the level of the prescribed textbooks.
- > The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### **Course Outcomes [Bloom's Knowledge Level (KL)]:**

CO1: Ability of students to describe the basics of additive manufacturing (AM). [K1, K2]

CO2: Ability of students to explore various liquid-based AM processes. [K1, K2, K3, K4]

CO3: Ability of students to know about extrusion, sheet-lamination and powder-based AM processes. [K1, K2, K3, K4]

CO4: Ability of students to develop understanding about the metal base AM processes. [K1, K2, K3, K4]

CO/PO	PO01	PO02	PO03	PO04	PO05	PO06	PO07	PO08	PO09	PO10	PO11	PO12

CO3	3	3	3	3	3	-	-	-	3	1	3	3
CO4	3	3	3	3	2	-	-	-	3	1	3	3

Course Content	No of lectures
Unit I Introduction to 3D-Printing (Additive Manufacturing): Introduction to Additive Manufacturing (AM), Evolution of Printing as an Additive Manufacturing Process, Distinction between AM & CNC machining, Steps in AM, Classification of AM processes, Advantages of AM and Types of materials for AM. Materials science for AM - Multifunctional and graded materials in AM, Role of solidification rate, Evolution of non-equilibrium structure, microstructural studies, Structure property relationship, case studies. Post Processing of AM Parts. Guidelines for AM Process Selection.	[7]

------

Approved by BoS of USAR : 15/06/2023, Approved by AC sub-committee : 04/07/2023 Applicable from Batch Admitted in Academic Session 2021-22 Onwards Page | 124

Unit II Vat Photopolymerization AM Processes: Stereolithography (SL), Materials, Process Modeling, SL resin curing process, Mask Projection Processes, Two-Photon vat photopolymerization. Case studies Material Jetting AM Process: Material Jetting Process, Materials, Process Benefits and Drawbacks, Applications of Material Jetting Processes. Case studies.	[9]
Unit III Extrusion-Based AM Processes: Fused Deposition Modelling (FDM), Principles, Materials, Process Modelling, Plotting and path control, Bio-Extrusion, Contour Crafting. Case studies Sheet Lamination AM Processes: Bonding Mechanisms, Materials, Laminated Object Manufacturing (LOM), Ultrasonic Consolidation (UC), Gluing, Thermal bonding, LOM and UC applications, case studies.  Powder Bed Fusion AM Processes: Selective laser Sintering (SLS), Powder fusion mechanism and powder handling, SLS Metal and ceramic part creation, Electron Beam melting(EBM). Case studies.	[9]
Unit IV Directed Energy Deposition AM Processes: Process Description, Material Delivery, Laser Engineered Net Shaping (LENS), Direct Metal Deposition (DMD), Electron Beam Based Metal Deposition Additive friction stir deposition process: principle, parameters, applications, functionally graded additive manufacturing components, Case studies.  Wire Laser/Arc Additive Manufacturing: Process, parameters, applications, advantages and disadvantages, case studies.

CO4	3	3	3	3	2	-	-	-	-	1	1	3

Course Content	No of lectures
Unit I Asymptotic notations for time and space complexity, Big-Oh notation, $\Theta$ notation, $\Omega$ notation, the little-oh notation, the little-omega notation, Recurrence relations: iteration method, recursion tree method, substitution method, master method, Data Structures for Disjoint Sets,. Complexity analysis, Insertion sort, Merge Sort, Quick sort. Strassen's algorithm for Matrix Multiplications.	[10]

\_\_\_\_\_\_

Unit II Ingredients of Dynamic Programming, emphasis on optimal substructure, overlapping substructures, memorization. Matrix Chain Multiplication, Longest common subsequence and optimal binary search trees problems, 0-1 knapsack problem, Binomial coefficient computation through dynamic programming. Floyd Warshall algorithm.	[10]
Unit III Greedy Algorithms: Elements of Greedy strategy, overview of local and global optima, matroid, Activity selection problem, Fractional Knapsack problem, Huffman Codes, A task scheduling problem. Minimum Spanning Trees: Kruskal's and Prim's Algorithm, Single source shortest path: Dijkstra and Bellman Ford Algorithm.	[10]
Unit IV The naïve String Matching algorithm, The Rabin-Karp Algorithm, String Matching with finite automata, The Knuth-Morris Pratt algorithm.	[8]

Unit I Introduction: Software Engineering Paradigms. Software processes and its models (waterfall, Increment Process Models, Prototype Model, RAD, Spiral Model, Rational Unified Process) Agile Development model, plan driven vs agile model of development, agile methods and development techniques.	[10]
Unit II	

Software Requirement Analysis and Specification: Software Requirement Process, Functional and non-functional requirements, Quantifiable and Quality Requirements, System and software Requirements, requirement elicitation methods, requirement analysis and validation, requirement review or requirement change, SRS document.

System modelling: Interaction models: Use case diagram, sequence diagrams, Structural models: class diagrams, generalization, aggregation, Behavioural models: ER diagrams, Data flow diagrams, data dictionaries.

### **Unit III**

Software Metrics: Project Metrics, Product Metrics and Process Metrics. Information flow Model Software Design: Architectural views and patterns, Modularity (cohesion and coupling), Information hiding, Functional independence, Function Oriented Design, Object Oriented Design, User Interface Design.

[10]

[10]

### Unit IV

Software Testing: Software process, Functional testing: Boundary value analysis, Equivalence class testing, Decision table testing, Cause effect graphing, Structural testing: Path testing, Data flow and mutation testing, unit testing, integration and system testing, User testing (alpha, beta and acceptance testing).

[10]

### **Course Outcomes [Bloom's Knowledge Level (KL)]:**

CO1: Ability of students to understand metaverse and AR/VR technologies [K1, K2]

CO2: Ability of students to understand building blocks of the metaverse [K1, K2].

CO3: Ability of students to learn how the metaverse will revolutionize everything [K1, K2, K4]

**CO4:** Ability of students to apply and analyze various successful applications of metaverse through case study **[K3, K4]** 

CO/PO	PO01	PO02	PO03	PO04	PO05	PO06	PO07	PO08	PO09	PO10	PO11	PO12

CO2	3	2	3	3	3	-	-	-	2	2	2	3
CO3	3	2	1	3	3	-	-	-	2	2	2	3
CO4	3	3	3	3	3	-	-	-	3	2	2	3

Course Content	No of lectures
Unit I Introduction- what is metaverse?, A brief history of the future, Confusion and uncertainty, A definition, The next internet, Applications of the Metaverse Advantages and Challenges of the Metaverse, Demo of the Metaverse. AR/VR: Demystifying eXtended Reality, Understanding eXtended Reality, Experience XR, XR Applications, XR for Social Good, Working with XR, Design Thinking with XR, Making a Mark, Designing for XR, Setting up XR, AR/VR and the Metaverse	[10]
Unit II Building the Metaverse: Networking, Computing, Virtual world engines, Interoperability, Hardware, Payment rails, Blockchains and metaverse.	[10]

Approved by BoS of USAR: 15/06/2023, Approved by AC sub-committee: 04/07/2023

Applicable from Batch Admitted in Academic Session 2021-22 Onwards Page | 136

Unit III  How the metaverse will revolutionize Everything: When will the metaverse arrive?, Meta-businesses, Metaverse winners and losers, Metaversal existence, The Metaverse vs. Web 3.0, Types of the Metaverse, Cryptocurrency and the Metaverse, NFTs and the Metaverse.	[10]
Unit IV  Metaverse case study: Metaverse in Education: Vision, Opportunities, and Challenges; Metaverse Virtual Learning Management Based on Gamification Techniques Model to Enhance Total Experience; Metaverse Framework: A Case Study on E-Learning Environment (ELEM); Augmented Reality in Surgery: A Scoping Review, A Case Study on Metaverse Marketing of Jewelry Brand, Agricultural Metaverse: Key Technologies, Application Scenarios, Challenges and Prospects.	[8]

CO4	3	3	3	3	3	2	-	-	1	1	1	3

Course Content	No of Lectures
Unit I:	
Introduction to Software Project Management (SPM): Definition of a Software Project (SP), SP Vs. other types of projects activities covered by SPM, categorizing SPs, project as a system, management control.  Software Project scheduling and planning: Basic concepts, project scheduling, defining a task set and task network, scheduling, earned value analysis indicators, Project elements, WBS [Work Breakdown Structure]. Selecting a project, identifying project scope and objectives, identifying project infrastructure, analyzing project characteristics, identifying project products and activities.	[~]

......

Unit II: Project Estimation and Evaluation: software project estimation, decomposition techniques, empirical estimation models, estimation for object oriented projects, estimation for Agile development and Web engineering projects. Cost benefit analysis, cash flow forecasting, cost benefit evaluation techniques, risk evaluation. Selection of an appropriate project report; choice of process model, structured methods, rapid application development, water fall, spiral models, Prototyping delivery, Albrecht function point analysis.	[10]
Unit III: Activity planning: Objectives of activity planning, project schedule, projects and activities,	
sequencing and scheduling activities, Network planning model; Network Diagrams: CPM, Bar Charts, Gantt Chart, PERT [ Activity-on-arrow network; Activity on Node network ] Precedence network; Forward pass; Backward pass; Critical path.  Risk Analysis and Management: Risk and risk types, Risk Break down Structure, Risk management process, Evaluating schedule risk using PERT.	[12]
Unit IV:	
Resource allocation & Monitoring the control: Introduction, the nature of resources, identifying resource requirements, visualizing progress, Project Tracking, Status Reports, Milestone Analysis, Actual Versus Estimated Analysis of Effort and Schedule.  Software quality and project closure: Defining software quality attributes, ISO 9126, Software quality measures, Project Closure Analysis, The Role of Closure Analysis, Performing Closure Analysis.  Project Management Case Study.	[10]

<b>Simulation Examples:</b> Simulation of Queuing systems, Simulation of Inventory System, Other simulation examples.	
Unit II General Principles: Concepts in discrete - event simulation, event scheduling/ Time advance algorithm, simulation using event scheduling. Random Numbers: Properties, Generations methods, Tests for Random number- Frequency test, Runs test, Autocorrelation test.	[8]
<b>Unit III System Simulation:</b> Techniques of simulation, Monte Carlo method, Experimental nature of simulation, Distributed lag models, Cobweb models Continuous system models, Analog and Hybrid simulation, Feedback systems, Computers in simulation studies. <b>Simulation software:</b> Comparison of simulation packages with programming languages, classification of simulation software, Description of a general purpose simulation package, Design of scenario and modules, dialog box, database, animation, plots and output, interfacing with other software, summary of results. Examples with MATLAB/ AWESIM / ARENA.	[8]
Unit IV Analysis after simulation: Importance of the variance of the sample mean, Procedure for estimating mean and variance, Subinterval method, Replication Method, Regenerative method; Variance reduction techniques, Start up policies, Stopping rules, Statistical inferences, Design of experiments. Verification and validation of simulated models, optimization via simulation. Case studies on application of modelling and simulation in manufacturing systems.	[8]

Paper Code: ARO 471	L	T/P	Credits
Subject: Software Metrics	3	0	3

### **Marking Scheme:**

Teachers Continuous Evaluation: As per university examination norms from time to time. End Term Theory Examination: As per university examination norms from time to time.

### **INSTRUCTIONS TO PAPER SETTERS: Maximum Marks: As per University norms**

- ➤ There should be 9 questions in the end term examination question paper
- ➤ Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions.
- Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit.
- The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/level of the questions to be asked should be at the level of the prescribed textbooks.
- > The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### **Course Outcomes [Bloom's Knowledge Level (KL)]:**

**CO1:** Understand various fundamentals of measurement and software metrics

CO2 Apply frame work and analysis techniques for software measurement.

**CO3:** Apply internal and external attributes of software product for effort estimation.

**CO4:** Apply reliability models for predicting software quality

Course Content	No of lectures
Unit I	
Introduction: Electric Vehicle History, Components of Electric Vehicle, Comparison with	
Internal combustion Engine: Technology, Comparison with Internal combustion Engine: Benefits	
and Challenges, EV classification and their electrification levels. EV Terminology	[8]
Motor Torque Calculations for Electric Vehicle: Calculating the Rolling Resistance,	
calculating the grade resistance, Calculating the Acceleration Force, Finding the Total Tractive	
Effort, Torque Required on the Drive Wheel	

2

------

Unit II Electric Vehicle Architecture Design: Types of Electric Vehicle and components, Electrical protection and system requirement, Photovoltaic solar based EV design, Battery Electric vehicle (BEV), Hybrid electric vehicle (HEV), Plug-in hybrid vehicle (PHEV), Fuel cell electric vehicle (FCEV), Electrification Level of EV, Comparison of fuel vs Electric and solar power, Solar Power operated Electric vehicles Electric Drive and controller: Types of Motors, Selection and sizing of Motor, RPM and Torque calculation of motor, Motor Controllers, Component sizing, Physical locations, Mechanical connection of motor, Electrical connection of motor	[8]
Unit III Energy Storage Solutions (ESS): Cell Types (Lead Acid/Li/NiMH), Battery charging and discharging calculation, Cell Selection and sizing, Battery lay outing design, Battery Pack Configuration, Battery Pack Construction, Battery selection criteria. Control Unit: Function of CU, Development Process, Software, Hardware, Data Management, GUI/HMI	[8]
Unit IV Electric Vehicles charging station: Type of Charging station, Selection and Sizing of charging station, Components of charging station, Single line diagram of charging station Indian and Global Scenario: Technology Scenario, Market Scenario, Policies and Regulations, Payback and commercial model, Payback and commercial model, policies in India.	[8]

Paper Code: ARO 485	L	T/P	Credits
Subject: Cloud, Dew, Edge and Fog [CDEF] Computing	3	0	3

### Marking Scheme:

Teachers Continuous Evaluation: As per university examination norms from time to time. End Term Theory Examination: As per university examination norms from time to time.

### INSTRUCTIONS TO PAPER SETTERS: Maximum Marks: As per university norms

- > There should be 9 questions in the end term examination question paper
- ➤ Question No. 1 should be compulsory and cover the entire syllabus. This question should have objective or short answer type questions.
- Apart from Question No. 1, the rest of the paper shall consist of four units as per the syllabus. Every unit should have two questions. However, students may be asked to attempt only 1 question from each unit.
- The questions are to be framed keeping in view the learning outcomes of course/paper. The standard/level of the questions to be asked should be at the level of the prescribed textbooks.
- > The requirement of (scientific) calculators/ log-tables/ data-tables may be specified if required

### Course Outcomes [Bloom's Knowledge Level (KL)]:

**CO1:** To **Understand** the basic concepts of Cloud Computing. **[K2]** 

CO2: To Understand and remember the Service Models such as SAAS, PAAS and IAAS. [K1, K2]

CO3: To Analyze the different Threats, Vulnerabilities and Attacks in Cloud computing Domain. [K4]

CO4: To Apply the MiCEF Concepts to Create Cloud Computing Problems and solve them. [K3, K6]
