**EVENT REPORT**

BIN IT RIGHT

Date: 01.10.2026

Venue: D-109, GGSIPU

**About UdyoG**

Udyog is the Undergraduate Commerce Society dedicated to promoting experiential learning and student engagement beyond the classroom. The society provides a platform for students to develop analytical, communication, leadership, and teamwork skills through interactive events, competitions, workshops, and awareness initiatives. Udyog aims to bridge theoretical knowledge with practical application while fostering creativity, collaboration, and responsible citizenship among students.

**What the Event Was**

Bin It Right was an interactive waste-management policy case competition organised by UDYOG on 1 October 2026. The objective of the event was to educate participants about waste segregation and encourage critical thinking regarding environmental responsibility.

At the beginning of the activity, participants were provided with an information sheet explaining different types of dustbins and the categories of waste associated with each. The participants were given a common case study based on waste management. Teams were then presented with environmental scenarios involving multiple types of waste. To make the activity more dynamic, a series of news flashes were introduced throughout the event. These updates provided additional information and developments related to the scenarios, requiring participants to continuously reassess their understanding and adapt their conclusions. Based on the scenario and the information revealed through the news flashes, teams were required to rank the different waste categories from the most responsible to the least responsible for the situation. After completing their analysis, each team presented its rankings and explained the reasoning behind its decisions, highlighting how specific news updates influenced their thought process.

**Participation**

The event witnessed enthusiastic participation from 65 students. Participants actively engaged in discussions, evaluated the information provided, collaborated with their teammates, and confidently presented their perspectives before the audience. The interactive format encouraged involvement from all participants and created a highly engaging learning environment.

**Learning Outcome**

The event successfully increased awareness regarding proper waste segregation and responsible waste disposal practices. Participants gained a better understanding of different waste categories and their impact on the environment.

The activity also strengthened critical thinking and decision-making skills by requiring participants to analyze evolving information before reaching conclusions. Through team discussions and presentations, students enhanced their communication, collaboration, and problem-solving abilities.

Overall, Bin It Right served as an engaging and educational initiative that combined environmental awareness with analytical learning, encouraging participants to become more responsible and informed citizens.
